

Parallels -- Yes

Bass: Harley Benton P/J, 5-string, passive. Full board.

1978 (*Tormato*). ~132 BPM (estimate -- no hard chart reference, tempo isn't load-bearing for the tone choices below). A relentless, full-throttle rocker almost start to finish -- no big quiet-verse/loud-chorus contrast to build a CTL split around, so this patch is one steady, massive, driven tone throughout. Chris Squire famously tracked this song's bass through a church organ amplifier setup, not a conventional bass rig -- the goal here is that huge, cathedral-scale, faintly swirling low end, not a typical Squire bright-and-driven Rickenbacker growl (that's what the existing `Yes-Squire` artist patch already covers).

No CTL on this one -- the whole song sits at this level of size and drive.

Why an IR (not a NAM) here

None of the current Darkglass NAM captures approximate this song's specific character -- they're voiced for modern metal-bass distortion or (Harmonic Booster/B7K clean) a hi-fi DI tone, not a huge, driven, organ-amp-through-a-cabinet quality. This is a case where the "prefer NAM for bass" weighting doesn't apply -- nothing in the library is a genuine match, so a real GP-5 AMP model plus one of the newer bass cab IRs does the job better. Sunn215 (Slot 8) specifically: its own description flags it as working "great with distortion and fuzz," which is exactly the pairing this patch needs -- a fat, one-of-a-kind, driven-friendly low end instead of a hi-fi, clean-optimized cab.

GP-5 Settings

Module order: NR -> PRE -> DST -> AMP -> CAB -> EQ -> MOD -> DLY -> RVB

NR -- Gate

- THRE: 35
- Always on. A driven, high-gain patch like this needs a real gate to keep the noise floor in check between hits.

PRE -- Off

Not used. No boost stage needed -- this patch is already at full size and drive all the time; there's no "bigger" state to boost into.

DST -- Bass OD (Boss ODB-3)

- Gain: 75, Blend: 70, VOL: 60, Bass: 45, Treble: 65
- Always on. This is the core of the driven, huge-amp character -- high Gain for real grit, Blend at 70 keeps it mostly wet without fully drowning the fundamental (note definition survives under the drive). Bass rolled back to 45 on the pedal itself -- low end comes from the AMP/CAB stage and the note, not a flabby DST signal.

AMP -- Classic Bass (Ampeg SVT)

- Gain: 65, Bass: 55, Middle: 70, MidFreq: 800Hz, Treble: 60, VOL: 75
- Always on. SVT pushed hot -- present, aggressive, not scooped. Middle at 70 with MidFreq at 800Hz is the

growl-and-cut zone that lets this huge bass tone punch through Steve Howe's driving guitar and a genuinely busy Yes arrangement instead of just adding mud underneath it.

CAB -- off, using IR instead

See "IR Cab Captures" below.

EQ -- Bass EQ 1

- 33Hz: +4, 150Hz: +2, 600Hz: -2, 2kHz: +8, 8kHz: +4, VOL: 55
- Always on. Unlike a mix-conscious rock/metal bass patch, this one actually wants real sub weight (33Hz/150Hz both pushed) -- the "massive cathedral organ" character depends on genuine low-end power, not a scooped/tight tone. 600Hz trimmed to avoid boxy mud, 2kHz pushed hard for cut-through bite against the busy arrangement, 8kHz nudged up for edge on the driven amp grit.

MOD -- V-Roto (BBD Blue Vibrato)

- Depth: 55, Rate: 1.0Hz
- Always on. Heavier than the usual light-touch default, deliberately -- this song is specifically known for an unusual, swirling texture (the rotating-speaker/Leslie-adjacent quality of the real recording), which is exactly the exception case for going past a subtle modulation setting. Rate kept slow (~1Hz) for a majestic, "chorale"-speed swirl rather than a fast tremolo-like wobble.

DLY -- Off

Not used. This arrangement is dense and busy -- delay repeats would blur the bass's attack and definition, which this patch can't afford to lose given how hard it's already pushing gain.

RVB -- Hall

- Mix: 20, Decay: 40, Trail: On
- Always on. A real nod to the recording's actual origin (a church organ amp) -- a touch of cathedral-scale space, kept light enough not to wash out the attack this driven a tone still needs.

Full Pedalboard

Signal chain order: Flamma FS-08 Octave -> Donner Ultimate Comp -> Donner Stylish Fuzz -> Joyo Tidal Wave -> Joyo Narcissus -> Valeton GP-5.

Flamma FS-08 Octave -- bypassed

- All octave knobs (-2OCT, -OCT, +OCT, +2OCT) at 0, Dry at 100
- No octave layering -- the 5-string's low B plus this patch's already-massive low end covers the range this song needs.

Donner Ultimate Comp -- engaged

- COMP: 55, TONE: 55, LEVEL: 55, Mode: TREBLE
- Always on. Squashes pick/finger attack into a consistent, driving level -- this is a relentless rock part, not a dynamic one. TREBLE mode keeps attack articulate before it hits two more gain stages downstream.

Donner Stylish Fuzz -- engaged

- Sustain: 45, Treble: 55, Bass: 35, Volume: 55

- Always on. A second layered gain stage ahead of the Tidal Wave and the GP-5's own Bass OD -- this huge, driven tone benefits from stacked distortion the same way the RammGrind patch's approach does, though dialed to moderate (not maxed) so it thickens rather than turns to splatter. Bass rolled back on the pedal itself, same reasoning as always: keep the low end controlled at the source.

Joyo Tidal Wave -- engaged

- Drive: 60, Blend: 55, Presence: 55, Level: 60
- Treble: 55, Middle: 62, Bass: 50
- Mid-Frequency toggle: 500Hz (body and weight, matches this song's massive-not-tight low end goal)
- Bass-Shift toggle: 40Hz (fuller low end -- this patch wants real size, not tightness)
- Cab-Sim (DI out): On
- Ground Lift: Off (only flip on if a specific room throws hum)
- Another real gain/preamp stage, not just a glue stage -- this patch's size comes from genuinely cascaded drive (fuzz, Tidal Wave, Bass OD, then a hot SVT), matching how big and relentless the actual recording is.

Joyo Narcissus -- bypassed

Modulation is handled entirely by the GP-5's own MOD module (V-Roto). Stacking a second modulation source here would fight with the vibrato's swirl instead of complementing it.

Valeton GP-5

See GP-5 settings above.

Notes

No CTL choreography needed -- this patch loads into its one, full-size, driven tone and stays there for the whole song.
