Believe (Rhythm Guitar) -- Brooks & Dunn

From *Hillbilly Deluxe* (2005). About 66 BPM, est. It won CMA Single and Song of the Year in 2006.
A slow gospel-tinged ballad. It starts intimate, with piano and vocal carrying it, and builds to a huge choir-backed climax.
The guitar starts sparse with clean arpeggios and ends big with a sustained, singing lead.
Built from the song's overall sound. I haven't verified the exact guitars and amps on the record.
Instrument: Stratocaster (HSS). Neck pickup for the arpeggios. Bridge humbucker for the climax lead.
GP-5 only, Stratocaster (HSS), no pedalboard.

Patch VOL: 70. Raised from 50 on 2026-10-01, Michael's setting after the snaptone VOL pass.

Module chain

NR -- Gate, always on.
THRE: 14.
Low. Long notes need to decay.

PRE -- Boost (EP Booster), on CTL.
Gain: 42, +3dB: on, Bright: off.
Stacks into the Green OD for the climax lead. Adds level so it soars over the choir.

DST -- Green OD (TS-808), on CTL.
Gain: 36, Tone: 55, VOL: 64.
A singing, sustained lead tone. Gain 36 plus the Boost gives long sustain without fizz.

AMP/CAB -- NAM SnapTone, slot 62: NashClean (always on)
- Built from the `CLEANEST - Fender Deluxe Reverb 1965 [Hyper Accuracy]` NAM and the Origin Effects Brown Deluxe 1x12 Medium Mix IR, combined into one snaptone.
- Real 1965 Fender Deluxe Reverb at its cleanest setting, into the Origin Effects Brown Deluxe 1x12.
- Clean Nashville ballad electric. The cleanest Deluxe setting.
- Gain: 50, VOL: 75, Bass: 48, Middle: 52, Treble: 54
- Gain 50: the capture as built.
- Bass 48: low end pulled back a little.
- Middle 52: a touch more midrange.
- Treble 54: a touch more top end.
- VOL 75: the level Michael set for this snaptone in the 2026-10-01 VOL audit. Trim here if the patch jumps in level against your others.
- Same in both CTL states. AMP and CAB are off in the `.prst`, so nothing stacks on the capture. The N->S block calls slot 62 directly.

EQ -- Guitar EQ 2, always on.
100Hz: -3, 500Hz: -1, 1kHz: 0, 3kHz: +1, 6kHz: -1, VOL: 50.
The low cut keeps the ambience clear. The top is slightly trimmed.

MOD -- off. No modulation. Tape and hall give enough movement.

DLY -- Tape, always on.
Mix: 16, Time: 450ms, F.Back: 25, Trail: on.
About an eighth note at 66 BPM. Warm tape repeats in both states.

RVB -- Hall, always on.
Mix: 24, Decay: 50, Trail: on.
A church-adjacent hall that fits the gospel theme. Mix 24.

CTL footswitch

On CTL: PRE (Boost), DST (Green OD).

- **CTL off** -- Rhythm. Chimey clean arpeggios with tape echo and hall. Use it for the intimate verses. This is the resting state the patch loads into.
- **CTL on** -- Lead. Boost plus Green OD for the soaring climax lead and the melodic fills in the build.

Stay off through the verses. Engage for the build and the final choir section.

MIDI toggles

MIDI = True (added 2026-10-12). With no MIDI controller connected, the patch loads and plays exactly as before. MIDI adds single-block toggles on top of CTL.

On MIDI: DST (Green OD), also on CTL.

Sounds:
- **Verse arpeggios** (default). CTL off. Chimey clean with tape echo and hall.
- **Build.** CTL off, MIDI DST on. The Green OD alone, without the boost: fuller strummed rhythm as the band comes in and the song builds.
- **Climax lead** (CTL on). Boost + Green OD for the soaring lead over the choir.
- Section map: verses (default) -> the build: MIDI DST on -> choir climax: MIDI DST off, then CTL on (CTL brings the Green OD back with the boost).
- **Shared CTL/MIDI blocks:** before pressing CTL, switch any CTL block you changed by MIDI back to how it was. I haven't confirmed whether the GP-5's CTL flips each block or sets it to a fixed state, and doing this gives the right result either way. Changing a block by MIDI *after* pressing CTL is always safe.
