One Last Breath (Rhythm Guitar) -- Creed

From *Weathered* (2001). About 62 BPM, est.
A slow post-grunge ballad. Clean, ringing arpeggios under the verses, then a heavy, thick chorus and a melodic solo.
Mark Tremonti is widely associated with Mesa Rectifiers in this era. A Rectifier can't give the clean verse, so this patch uses the same recipe as the Higher patch: a clean Matchless with a crunch box and boost stacked on CTL.
Built from the band's general sound. I haven't verified the exact guitars, amps or tuning on this track. Tremonti uses a lot of alternate tunings, so check yours against the record.
Instrument: Stratocaster (HSS). Neck or position 2 for the clean verses. Bridge humbucker for the chorus and solo.
GP-5 only, Stratocaster (HSS), no pedalboard.

AMP: Match CL + CAB: V30112 IR (User IR 10)

V30112 is the loaded guitar cab with real weight for the heavy chorus, and it still works for the clean tone. Same pairing as Higher, so the two Creed patches sit at the same level and voice.

Module chain

NR -- Gate, always on.
THRE: 25.
The boost plus distortion stack hisses. 25 cleans up the gaps without choking the clean arpeggios' decay.

PRE -- Boost (EP Booster), on CTL.
Gain: 45, +3dB: on, Bright: off.
Pushes the distortion harder for the chorus and adds level. Bright off keeps it thick, not fizzy.

DST -- La Charger (Crunch Box), on CTL.
Gain: 58, Tone: 52, VOL: 62.
The main heavy sound. A little more gain than Higher, because this chorus is heavier and slower. Tone 52 keeps it dark and thick.

AMP -- Match CL, always on.
Gain: 30, PRES: 50, VOL: 62, Bass: 50, Middle: 52, Treble: 52.
Matchless Chieftain clean. Chimey, high-headroom verses. Under the pedal stack it stays tight and doesn't add mud.

CAB -- User IR 10 (V30112), always on.
VOL: 60.

EQ -- Guitar EQ 2, always on.
100Hz: -2, 500Hz: 0, 1kHz: +1, 3kHz: +1, 6kHz: -1, VOL: 50.

Low cut keeps the slow, heavy chords tight. A small presence lift for both tones. -1 at 6kHz trims distortion fizz.

MOD -- off. No modulation. The delay supplies the movement.

DLY -- Analog, loads on. MIDI toggle (see MIDI toggles).
Mix: 14, Time: 726ms, Feedback: 22, Trail: on.
A dotted eighth at 62 BPM. It gives the clean arpeggios that ringing, cascading feel. Mix 14 keeps it under the heavy chorus.

RVB -- Hall, always on.
Mix: 15, Decay: 40, Trail: on.
Space for a slow ballad. It stays out of the way of the heavy chords.

CTL footswitch

On CTL: PRE (Boost), DST (La Charger).

- **CTL off** -- Rhythm. Clean, ringing arpeggios with dotted-eighth delay and hall. This is the resting state the patch loads into.
- **CTL on** -- Lead. Boost plus crunch box for the heavy chorus and the solo.

Engage CTL at the chorus and the solo. Drop back for the verses.

MIDI toggles

MIDI = True (added 2026-10-12). With no MIDI controller connected, the patch loads and plays exactly as before. MIDI adds single-block toggles on top of CTL.

On MIDI: DLY (Analog), MIDI-only, loads on.

Sounds:

- **Clean arpeggios** (default). CTL off, delay on. The cascading dotted-eighth verse.
- **Heavy chorus.** CTL on, MIDI DLY off. Boost + crunch box with no dotted-eighth repeats smearing the big chords. Tight and huge.
- **Solo.** CTL on, delay on. The repeats come back to make the melodic solo sing.
- Section map: verse (default) -> chorus: CTL on, DLY off -> back to verse: CTL off, DLY on -> solo: CTL on, DLY on.
