Sister Christian - Night Ranger

Stratocaster (HSS), Full Board. Brad Gillis played this on a Strat-style guitar with a Floyd Rose, so the HSS Strat is the right instrument for it. Rhythm sound is a clean-to-crunch Marshall push kept glossy with light chorus. Lead sound kicks in a boost and delay for the solo breaks. Tempo: 101 BPM.

GP-5 Settings

Module order: NR -> PRE -> DST -> AMP -> CAB -> EQ -> MOD -> DLY -> RVB

- **NR -- Gate.** THRE 30. Keeps the compressed, mid-gain chain quiet between chords. Always on.
- **PRE -- COMP4.** Sustain 45, Attack 55, VOL 100, Clip 40. Glassy 80s compression, evens out pick attack on the arpeggiated verse parts. Always on.
- **DST -- La Charger.** Gain 60, Tone 65, VOL 80. Off for rhythm -- the amp's own breakup carries the verse/chorus. On for lead -- pushes extra gain and volume to cut through for the solo. On CTL.

AMP/CAB -- NAM SnapTone, slot 71: HotMarshall (always on)

- Built from the `JCM800 2203 - P5 B5 M5 T5 MV6 G7 - AZG - 700` NAM and the BlendOfAll_dc (Marshall 1960AV) IR, combined into one snaptone.
- Real JCM800 2203 at Gain 7, Master 6: hot rhythm crunch. Into a 1960AV 4x12 mic blend.
- 80s rock rhythm on a hot JCM800. The CTL drive pushes it into lead.
- Gain: 43, VOL: 40, Bass: 55, Middle: 60, Treble: 62
- Gain 43: noticeably under default. This part wants less push than the other HotMarshall patches.
- Bass 55: a touch more low end.
- Middle 60: more midrange.
- Treble 62: more top end.
- VOL 40: the level Michael set for this snaptone in the 2026-10-01 VOL audit. Trim here if the patch jumps in level against your others.
- Same in both CTL states. AMP and CAB are off in the `.prst`, so nothing stacks on the capture. The N->S block calls slot 71 directly.

- **EQ -- Guitar EQ 2.** 100Hz 0, 500Hz +5, 1kHz +10, 3kHz +12, 6kHz +5, VOL 65. Off for rhythm -- flat, don't fight the amp tone. On for lead -- mid/presence push so the solo sits on top of the mix. On CTL.
- **MOD -- Off.** Chorus duty is handled upstream by the Joyo Narcissus, so the GP-5 doesn't double the chorus into mud.
- **DLY -- Analog.** Mix 25, Time 380ms, Feedback 20, Trail on. Off for rhythm -- keep the verse dry and direct. On for lead -- adds width and a slap of ambience behind the solo. On CTL.
- **RVB -- Room.** Mix 22, Decay 35, Trail on. Modest room, gives the ballad some air without getting swampy. Always on.

CTL Switch

- **CTL Off** = rhythm/verse sound.

- **CTL On** = lead/solo sound.
- Modules on CTL: DST, EQ, DLY. All three flip together on the same footswitch press.
- Use CTL Off for the verses and the main rhythm chorus. Switch to CTL On for the guitar solo and any other lead break.

MIDI toggles

MIDI = True (added 2026-10-12). With no MIDI controller connected, the patch loads and plays exactly as before. MIDI adds single-block toggles on top of CTL.

On MIDI: DST (La Charger), also on CTL.

Sounds:

- **Verse** (default). CTL off. The HotMarshall's own clean-to-crunch push, glossy and compressed under the piano.
- **"Motoring" chorus.** CTL off, MIDI DST on. The crunch box pushes the power chords harder for the big chorus hits, without the solo EQ lift and delay.
- **Solo** (CTL on). DST + EQ + delay. Stack the King of Kings Right channel on the board as before.
- **Shared CTL/MIDI blocks:** before pressing CTL, switch any CTL block you changed by MIDI back to how it was. I haven't confirmed whether the GP-5's CTL flips each block or sets it to a fixed state, and doing this gives the right result either way. Changing a block by MIDI *after* pressing CTL is always safe.

Full Pedalboard

1. **Flamma FS-08 Octave** -- Off. No octave content in this song.
2. **Donner Ultimate Comp** -- On, all song. COMP ~3/10 (light squeeze), TONE: Normal, LEVEL: unity (~12 o'clock). Adds a second layer of glassy compression ahead of everything else, evening out pick attack on the verse chords.
3. **Donner Stylish Fuzz** -- Off. Not a fuzz tone, don't need it.
4. **Joyo King of Kings** -- Left channel: bypassed all song, footswitch off. Right channel: bypassed during rhythm, footswitch engaged only for the lead/solo sections -- Volume ~7/10, Gain ~5/10, Tone ~6/10, Clipping toggle in the brighter/harder position for extra edge, Feedback toggle in the higher-gain position for extra sustain. Acts as a boost in front of the GP-5's DST for the solo -- stacks with CTL On.
5. **Joyo Narcissus** -- On, all song, Vintage mode. Depth ~2/10, Rate ~3/10 (slow, subtle), Width ~4/10 (narrow -- keep it subtle, not stereo-huge). This is the song's chorus voice -- that's why the GP-5's own MOD is off.
6. **Valeton GP-5** -- as programmed above.
