When Wind Meets Fire (Rhythm Guitar) -- Elevation Worship

Elevation Worship. Modern worship anthem. About 72 BPM, est. I haven't verified the tempo, so check the dotted-eighth delay time against the recording (see DLY below).
The title comes from the Pentecost imagery in Acts 2, and the arrangement builds the way modern worship songs usually do: quiet, ambient verses that grow into a big driven chorus and bridge.
Built from Elevation's general guitar sound. I haven't verified the exact parts or gear on this recording.
The standard worship guitar recipe: an edge-of-breakup boutique amp, a Tube Screamer-family drive, dotted-eighth delay, and a big modulated reverb.
Instrument: Stratocaster (HSS). Neck or position 2 for swells and verse parts. Bridge humbucker for the driven chorus and lead lines.
GP-5 only, Stratocaster (HSS), no pedalboard.

Module chain

NR -- Gate, always on.
THRE: 18.
Handles noise from the stacked boost and drive. Set low enough that volume-knob swells still fade in and out smoothly.

PRE -- Boost (EP Booster), on CTL.
Gain: 45, +3dB: on, Bright: off.
Hits the Green OD harder and adds level for the chorus and lead lines. Bright off keeps the stack thick.

DST -- Green OD, on CTL.
Gain: 38, Tone: 58, VOL: 64.
The main worship drive. Mid-forward, with the chords still clear. Tone 58 helps it cut through pads and keys.

AMP -- Foxy 30TB (always on)
- Gain: 35, Tone Cut: 40, VOL: 62, Bass: 48, Treble: 58, Char: Cool
- The GP-5's model of the Vox AC30HW Top Boost channel. Chimey AC30 for modern worship.
- Gain 35: edge of breakup, so volume-knob swells clean up and the Boost/Green OD push it into drive.
- Tone Cut 40, Treble 58: chime without harshness under the big reverb.
- Bass 48: close to flat.
- Char Cool: the cleaner voicing.
- Moved off the WorshipAC30 snaptone 2026-10-01. Michael dropped the AC30 NAMs until a better one turns up, so this uses the GP-5's own AC30 model.
- Same in both CTL states.

CAB -- User IR 10: V30112 (always on)
- VOL: 60
- Celestion V30 1x12 IR from the loaded set, the same cab as the other Elevation Worship patches.
- Same in both CTL states.

EQ -- Guitar EQ 2, always on.
100Hz: -3, 500Hz: -1, 1kHz: 0, 3kHz: +2, 6kHz: +1, VOL: 50.
The low cut is essential with this much ambience: it keeps the delay and reverb tails from getting muddy. A slight 500Hz cut and a 3kHz and 6kHz lift give the modern, glassy top.

MOD -- off. The Sweet Space reverb already carries modulation. A chorus on top of it would smear.

DLY -- Tape, loads on. MIDI toggle (see MIDI toggles).
Mix: 22, Time: 625ms, F.Back: 30, Trail: on.
Dotted eighth at 72 BPM (833ms x 0.75). If the real tempo differs, set Time = 45000 / BPM. Tape gives warmer repeats than Pure, so the rhythm doesn't turn into a ping-fest. Always on because it's part of the core sound in both states.

RVB -- Sweet Space, always on.
Mix: 30, Decay: 60, Damp: 45, Mod: 25, Trail: on.
A big modulated wash for the ambient pad sound. Damp 45 keeps the tail from turning into hiss. Mod 25 adds movement without seasickness.

CTL footswitch

On CTL: PRE (Boost), DST (Green OD).

- **CTL off** -- Rhythm and ambient. Edge-of-breakup clean into the dotted-eighth delay and the Sweet Space wash. Use it for intro swells, verse arpeggios, and quiet strumming. This is the resting state the patch loads into.
- **CTL on** -- Lead and driven. Boost into Green OD into the same amp and ambience. Use it for the big chorus, the bridge build, and melodic lead lines. The delay and reverb carry over, so the lead lines sing.

Engage CTL when the song opens into the chorus and bridge. Step off for the verses and any breakdown.

MIDI toggles

MIDI = True (added 2026-10-12). With no MIDI controller connected, the patch loads and plays exactly as before. MIDI adds single-block toggles on top of CTL.

On MIDI: PRE (Boost) and DST (Green OD), both also on CTL. DLY (Tape), MIDI-only, loads on.

Sounds:
- **Ambient** (default). CTL off. Swells, verse arpeggios, quiet strumming.
- **Driven rhythm.** CTL off, MIDI DST on. The Green OD alone, no boost: a mid-gain strum for the second verse and the build into the chorus.
- **Dry strum.** CTL off, MIDI DLY off. Rhythmic strumming without the dotted-eighth repeats, for any section where the delay fights the groove.
- **Anthem** (CTL on). Boost + Green OD with the full wash. Big chorus, bridge, lead lines.
- **Soft lead.** CTL on, MIDI PRE off. The Green OD without the boost: a smoother, quieter lead for melodic

lines over a breakdown.
- **Shared CTL/MIDI blocks:** before pressing CTL, switch any CTL block you changed by MIDI back to how it was. I haven't confirmed whether the GP-5's CTL flips each block or sets it to a fixed state, and doing this gives the right result either way. Changing a block by MIDI *after* pressing CTL is always safe.
