

Creep - Radiohead

Stratocaster (HSS), Full Board. Two sounds in this song: the clean, chorused verse arpeggios, and the famous distorted "chunk" hits that slam in right before each chorus line. Tempo: 92 BPM.

GP-5 Settings

Module order: NR -> PRE -> DST -> AMP -> CAB -> EQ -> MOD -> DLY -> RVB

- **NR -- Gate.** THRE 25. Light gate, just enough to keep the clean verse quiet. Always on.
- **PRE -- Boost.** Gain 55, +3dB on, Bright on. Off for the clean verse. On for the loud hits -- the treble kick that pushes into the DST/AMP for that sudden slam. On CTL.
- **DST -- SM Dist (Boss DS-1).** Gain 65, Tone 55, VOL 80. Off for the verse -- stays clean. On for the loud hits -- hard clipping gives that blown-out "chunk" character. On CTL.
- **AMP -- Foxy 30N (Vox AC30 Normal).** Gain 45, Tone Cut 40, VOL 78, Bright on. Base tone for both states -- clean and glassy on its own, and what the PRE/DST push into for the loud hits. Always on.
- **CAB -- Foxy 2x12 (Vox AC30 2x12).** VOL 88. Always on.
- **EQ -- Guitar EQ 1.** 125Hz 0, 400Hz -3, 800Hz 0, 1.6kHz +6, 4kHz +10. Slight mid scoop, treble lift -- the glassy, slightly icy clean tone Creep's verse is known for. Always on.
- **MOD -- Off.** Chorus duty is handled upstream by the Joyo Narcissus on the full board.
- **DLY -- Off.** Creep is a dry-ish song; no repeating delay in either section.
- **RVB -- Room.** Mix 18, Decay 30, Trail on. Small amount of room air, nothing washy. Always on.

CTL Switch

- **CTL Off** = clean verse sound.
- **CTL On** = loud "chunk" hits.
- Modules on CTL: PRE, DST. Both flip together on the same footswitch press.
- Use CTL Off through the verses. Switch to CTL On right at each loud chord blast, then back to CTL Off for the next verse.

Full Pedalboard

1. **Flamma FS-08 Octave** -- Off. No octave content in this song.
2. **Donner Ultimate Comp** -- On, all song. COMP ~3/10, TONE: Normal, LEVEL unity. Keeps the clean arpeggios even without squashing pick dynamics.
3. **Donner Stylish Fuzz** -- Bypassed for the verse, footswitch engaged only for the loud hits. Sustain ~7/10, Treble ~6/10, Bass ~5/10, Volume matched to unity. Treble kept hotter than Bass so the fuzz stays cutting rather than adding low-end mud on top of what the GP-5's DST/AMP are already providing. Stacks with the GP-5's PRE Boost and DST for the blown-out chord slam.
4. **Joyo King of Kings** -- Both channels bypassed all song. The Stylish Fuzz plus the GP-5's own PRE/DST already cover the loud section; stacking a third gain stage would mush the chord definition.

5. **Joyo Narcissus** -- On, all song, Vintage mode. Depth ~4/10, Rate ~4/10, Width ~6/10 (moderately wide -- helps give the clean tone its spacious, glassy quality). Stays on under the loud hits too, just buried under the crunch.

6. **Valeton GP-5** -- as programmed above.
