Everyday I Have the Blues -- John Mayer (Where the Light Is)

Revised 2026-10-16 following the approved library audit.
Type: Song. Instrument: HSS Stratocaster.
Full board. Board Option: White Tape.
Patch screen name: Everyday I. Patch VOL: 65.
Preset tempo: 104 BPM.

Full-band live cut, horns and rhythm section, mid-tempo shuffle around 104 BPM.
Mayer's rig for this set is boutique-clean-amp-into-a-Tube-Screamer-style-boost -- never a channel switch, just the same amp pushed harder for the solo.
This board copies that exact trick: one amp voicing, one boost that kicks it into gain for the lead break.
No modulation anywhere in this build. This song doesn't call for chorus/vibe -- it's a straight blues shuffle, and adding wobble would just muddy the horn-band mix.

Revision intent

Keep the musical role of the original patch while reducing redundant gain, excessive space and unclear switching where identified in audit entry 155.
The module settings and section map below are the active revision.
Audited capture volumes and Michael's explicit patch-level adjustments are preserved.
No hardware audition or measured level match has been performed.

GP-5 settings

Module order: NR -> PRE -> DST -> AMP -> CAB -> EQ -> MOD -> DLY -> RVB.
The encoded N->S block sits between DST and AMP when a SnapTone is used.

AMP/CAB replacement: SnapTone MayerDumble (slot 66): SLAMMIN_DUMBLE_FORD_CLN_BALANCED_S (Dumble ODS #102) + Bogner 2x12 EVM12L - SM57 1 - Cap Edge.
Slot: 66. Always on.
Gain: 55, VOL: 75, Bass: 55, Middle: 65, Treble: 60.
AMP and CAB are both off; the capture already includes its cab/DI character.
The capture voice is fixed across CTL states. Audited VOL is preserved for this slot.

NR - Gate

THRE: 15.
Fixed on. Not on CTL.
Use the lowest threshold that keeps rests quiet. Check soft notes and held-note decay. This gate is before the drives and amp; it does not directly gate noise generated after it.

PRE - Module off

Not used.

DST - Green OD

Gain: 45.
Tone: 55.
VOL: 65.
CTL assigned. Loads off; first CTL press switches it on.
Supplies the selected additional drive voice. Use its level and gain as separate controls. A pre-amp boost may add compression instead of a proportional solo-volume increase.

AMP - Module off

Not used.

CAB - Module off

Not used.

EQ - Guitar EQ 2

100Hz: -2.
500Hz: 3.
1kHz: 2.
3kHz: 0.
6kHz: -3.
VOL: 50.
Fixed on. Not on CTL.
Shapes note body and cut after the amp/capture. Where assigned to CTL, its output adds the specified lift after the gain stages. Numbers are GP-5 control values, not a calibrated loudness guarantee.

MOD - Module off

Not used.

DLY - Slapback

Mix: 15.
Time: 288.

F.Back: 20.
Trail: on.
CTL assigned. Loads off; first CTL press switches it on.
Adds repeats only in the listed states. Trail preserves the remaining repeats when this block is bypassed; it does not change delay time or mix.

RVB - Spring

Mix: 12.
Decay: 30.
Trail: on.
Fixed on. Not on CTL.
Adds the specified room or ambient tail. The revised mix keeps the initial note audible. Trail behavior follows the saved setting.
