

Are You Gonna Be My Girl -- Jet

Bass: Harley Benton P/J, 5-string, passive. Full board.

From *Get Born* (2003), ~137 BPM.

Mark Wilson's part is that instantly-recognizable descending riff that opens the song solo before the band crashes in -- driving, raw, garage-rock energy from the first note. Verses and choruses sit at similar energy, but the chorus is where the full band (and the fuzzed-out guitar hook) piles in behind the vocal.

CTL off = the lean, driving verse riff. CTL on = the fuller chorus push.

GP-5 settings

Module order: NR -> PRE -> DST -> AMP -> CAB -> EQ -> MOD -> DLY -> RVB.

NR -- Gate

- THRE: 25
- Always on. A bit higher than a clean patch needs -- there's real grit in this chain (Bass OD + a cranked amp model), so there's more to clean up between notes.

PRE -- Micro Boost -- On CTL

- Gain: 55
- CTL off: bypassed (verse). CTL on: engaged (chorus).
- Verse riff carries itself -- it's the hook of the song. Chorus gets a clean push to sit level with the full band piling in.

DST -- Bass OD

- Gain: 50, Blend: 70, VOL: 60, Bass: 58, Treble: 55
- Always on, same for both CTL states.
- This is the baseline garage-rock crunch that runs through the whole song, not just the chorus. Blend at 70 keeps the fundamental solid while still giving real edge to the tone.

AMP/CAB -- NAM SnapTone, slot 57: GrittySVT (always on)

- Built from the `SVT PUSHED (SVT-CL)` NAM and the Apg810 IR, combined into one snaptone.
- Real Ampeg SVT-CL pushed into grit, into the Apg810 8x10 IR.
- Garage-rock bark. A pushed SVT does it on a real bass amp instead of a guitar amp.
- Gain: 52, VOL: 55, Bass: 55, Middle: 60, Treble: 55
- Gain 52: a little over default. This part wants more push than the other GrittySVT patches.
- Bass 55: a touch more low end.
- Middle 60: more midrange.
- Treble 55: a touch more top end.
- VOL 55: the level Michael set for this snaptone in the 2026-10-02 VOL audit. Trim here if the patch jumps in level against your others.
- Same in both CTL states. AMP and CAB are off in the `.prst`, so nothing stacks on the capture. The N->S block calls slot 57 directly.

EQ -- Bass EQ 1

- 33Hz: +3, 150Hz: -2, 600Hz: +2, 2kHz: +5, 8kHz: +3, VOL: 55
- Always on, same for both CTL states.
- Big +5 at 2kHz and +3 at 8kHz keep this bright and present -- garage rock mixes are guitar-forward and loud, this part needs real cut to stay heard. -2 at 150Hz trims the mud that the Bass OD's Blend setting can add.

MOD -- Off

- No modulation. Straight, raw rock tone -- nothing here calls for it.

DLY -- Off

- Not used.

RVB -- Room -- On CTL

- Mix: 20, Decay: 30, Trail: On
- CTL off: bypassed (verse). CTL on: engaged (chorus).
- Verse stays dry and tight. Chorus gets a touch of room to open up alongside the boost, matching the bigger, more anthemic feel of the full band coming in.

CTL summary

- **CTL Off -- Verse.** The driving, lean garage-rock riff, dry and tight.
- **CTL On -- Chorus.** Boost and room reverb engage together, matching the full band and the fuzzed-out guitar hook piling in behind the vocal.
- Engage CTL right as the chorus hits, back off returning to the verse riff.

Full pedalboard (signal chain order)

1. Flamma FS-08 Octave -- Bypassed

- Footswitch off. This riff is instantly recognizable as-is -- an octave stack would clutter that identity.

2. Donner Ultimate Comp -- Engaged

- COMP: 55
- TONE: 60
- LEVEL: 60
- Mode: TREBLE
- Keeps the driving eighth-note picking even and consistent. TREBLE mode keeps pick attack bright and audible ahead of the Tidal Wave and the GP-5's own gain stages.

3. Donner Stylish Fuzz -- Bypassed

- Footswitch off. The GP-5's own Bass OD and the GrittySVT snaptone already cover this song's grit -- stacking a pedal fuzz on top of a 5-string P/J would risk turning the low end to mud.

4. Joyo Tidal Wave -- Engaged

- Drive: 45

- Blend: 65
- Presence: 60
- Level: 60
- Treble: 55
- Middle: 55
- Bass: 55
- Mid-Frequency: 1000Hz
- Bass-Shift: 80Hz
- Cab-Sim (DI out): Off
- Ground Lift: Off
- Adds baseline drive character before the signal hits the GP-5's own gain stages. Mid-Frequency at 1000Hz (rather than the fuller 500Hz option) pushes pick/finger attack and cut-through, matching this song's raw, bright garage-rock energy. Bass-Shift at 80Hz keeps things tight against the drums.

5. Jovo Narcissus -- Bypassed

- Footswitch off. No chorus -- matches the MOD-off call on the GP-5. Raw, dry rock tone throughout.

6. Valeton GP-5 -- see settings above.
