

Hoedown -- Emerson, Lake & Palmer

ELP, an arrangement of Copland's Hoedown. BPM est., very fast. Lake's bass here is driving, bright, and articulate, with some natural grit. Written for a fast ensemble piece. Exact recording rig not verified, so this is built from the band's general sound.

GP-5 only, P/J bass, no pedalboard.

Module chain

NR -- Gate, always on.

THRE: 20.

Driven, fast tone. 20 keeps gaps clean.

PRE -- COMP, always on.

Sustain: 45, VOL: 58.

Evens out fast runs.

DST -- Bass OD, always on.

Gain: 30, Blend: 50, VOL: 62, Bass: 50, Treble: 58.

Always on. Natural grit, bright top. Blend 50 keeps the low end.

AMP/CAB -- NAM SnapTone, slot 53: CleanSVT (always on)

- Built from the `SVT CLEAN (SVT-CL)` NAM and the Apg810 IR, combined into one snaptone.
- Real Ampeg SVT-CL preamp on its clean setting, into the Apg810 8x10 IR.
- Greg Lake's bass is clean and punchy under the organ. Clean SVT gives it the weight.
- Gain: 52, VOL: 65, Bass: 50, Middle: 60, Treble: 58
- Gain 52: a little over default. This part wants more push than the other CleanSVT patches.
- Bass 50: flat.
- Middle 60: more midrange.
- Treble 58: more top end.
- VOL 65: the level Michael set for this snaptone in the 2026-10-02 VOL audit. Trim here if the patch jumps in level against your others.
- Same in both CTL states. AMP and CAB are off in the `.prst`, so nothing stacks on the capture. The N->S block calls slot 53 directly.

EQ -- Bass EQ 2, on CTL.

50Hz: -2, 120Hz: 0, 400Hz: +2, 800Hz: +6, 4.5kHz: +4, VOL: 52.

On CTL. Mid boost of +6 at 800Hz, +4 at 4.5kHz. Pushes the bass forward for solos and unison lines.

MOD -- off. No modulation.

DLY -- off. No delay. Too fast for it.

RVB -- off. No reverb.

CTL footswitch

On CTL: EQ (Bass EQ 2).

- **CTL off** -- Main body. Bright, driven, compressed, even. This is the resting state the patch loads into.
- **CTL on** -- Solos and unison lines. EQ mid boost pushes the bass forward.

Engage CTL when the bass needs to cut through a solo or unison line. Back off for the rest.
