

Neon Moon -- Brooks & Dunn

From *Brand New Man* (1991). About 100 BPM, est.

Bass: Harley Benton P/J, 5-string, passive. GP-5 only.

A ballad-tempo two-step feel. Warm root-fifth with soft walk-ups. Round and dark, never pokey.

Built from the song's overall sound. I haven't verified the session bassist's exact rig.

Fingers over the neck. P pickup soloed or dominant. Tone knob around 40%.

Module chain

NR -- Gate, always on.

THRE: 10.

Barely there.

PRE -- COMP (Ross), always on.

Sustain: 35, VOL: 58.

Evens out the sustained notes lightly.

DST -- off. No grit.

AMP/CAB -- NAM SnapTone, slot 51: CleanB15 (always on)

- Built from the `Ampeg B18 - Head DI - Bass Chan - Vol 2.5 (B-18N)` NAM and the Apg115 IR, combined into one snaptone.
- Real Ampeg B-18N fliptop (the B-15 preamp circuit), captured clean at volume 2.5, into the Apg115 B-15 cab IR.
- Slow, sad two-step. Clean B-15 gives warm, sustained roots.
- Gain: 48, VOL: 80, Bass: 60, Middle: 48, Treble: 38
- Gain 48: a little under default. This part wants less push than the other CleanB15 patches.
- Bass 60: more low end.
- Middle 48: midrange pulled back a little.
- Treble 38: top end pulled back noticeably.
- VOL 80: the level Michael set for this snaptone in the 2026-10-02 VOL audit. Trim here if the patch jumps in level against your others.
- Same in both CTL states. AMP and CAB are off in the `.prst`, so nothing stacks on the capture. The N->S block calls slot 51 directly.

EQ -- Bass EQ 2, always on.

50Hz: +1, 120Hz: +2, 400Hz: 0, 800Hz: 0, 4.5kHz: -4, VOL: 52.

Warm lows, top rolled off.

MOD -- off.

DLY -- off.

RVB -- Room, on CTL.

Mix: 15, Decay: 30, Trail: on.

A small room bloom for the choruses.

CTL footswitch

On CTL: RVB (Room).

- **CTL off** -- Verses. Dry and warm. This is the resting state the patch loads into.
- **CTL on** -- Choruses. The room opens the bass up with the steel and the band.

Engage at the choruses. Off for the verses.
