

Red Dirt Road -- Brooks & Dunn

Title track of *Red Dirt Road* (2003). About 96 BPM, est.

Bass: Harley Benton P/J, 5-string, passive. GP-5 only.

A steady, warm mid-tempo pulse that grows with the chorus swells.

Built from the song's overall sound. I haven't verified the session bassist's exact rig.

Fingers. P forward. Tone knob around 50%.

Module chain

NR -- Gate, always on.

THRE: 12.

Low.

PRE -- COMP (Ross), always on.

Sustain: 40, VOL: 58.

Holds the pulse even.

DST -- Bass OD, on CTL.

Gain: 24, Blend: 28, VOL: 55, Bass: 52, Treble: 48.

Light grit for the chorus swells.

AMP/CAB -- NAM SnapTone, slot 51: CleanB15 (always on)

- Built from the `Ampeg B18 - Head DI - Bass Chan - Vol 2.5 (B-18N)` NAM and the Apg115 IR, combined into one snaptone.
- Real Ampeg B-18N fliptop (the B-15 preamp circuit), captured clean at volume 2.5, into the Apg115 B-15 cab IR.
- Mid-tempo country-rock. Clean B-15 thump under the guitars.
- Gain: 50, VOL: 80, Bass: 58, Middle: 50, Treble: 45
- Gain 50: the capture as built.
- Bass 58: more low end.
- Middle 50: flat.
- Treble 45: top end pulled back a little.
- VOL 80: the level Michael set for this snaptone in the 2026-10-02 VOL audit. Trim here if the patch jumps in level against your others.
- Same in both CTL states. AMP and CAB are off in the `.prst`, so nothing stacks on the capture. The N->S block calls slot 51 directly.

EQ -- Bass EQ 2, always on.

50Hz: +1, 120Hz: +2, 400Hz: -1, 800Hz: +1, 4.5kHz: -2, VOL: 52.

Warm lows and a light mud cut. 800Hz so the notes read.

MOD -- off.

DLY -- off.

RVB -- Room, on CTL.

Mix: 12, Decay: 30, Trail: on.

A small room for the chorus.

CTL footswitch

On CTL: DST (Bass OD), RVB (Room).

- **CTL off** -- Verses. Warm, clean, steady. This is the resting state the patch loads into.
- **CTL on** -- Choruses. Light grit plus a room for the swell.

Engage at the choruses. Off for the verses.
