

You Don't Know How It Feels -- Tom Petty

From *Wildflowers* (1994). About 92 BPM, est.

Bass: Harley Benton P/J, 5-string, passive. GP-5 only.

A deep, relaxed pocket under a dry groove. The bass is round, warm, and sits behind the beat. Nothing flashy.

Built from the song's overall sound. I haven't verified the exact bass rig on the record.

Fingers over the neck. P pickup soloed. Tone knob around 40%.

Module chain

NR -- Gate, always on.

THRE: 10.

Barely on.

PRE -- COMP (Ross), always on.

Sustain: 35, VOL: 58.

Light leveling.

DST -- off. No grit.

AMP/CAB -- NAM SnapTone, slot 54: FullB15 (always on)

- Built from the `Ampeg B18 - Head DI - Bass Chan - Vol 5 (B-18N)` NAM and the Apg115410 IR, combined into one snaptone.
- Real Ampeg B-18N at volume 5, warmer and fuller than the clean capture, into the Apg115410 (1x15 + 4x10) IR.
- Laid-back, warm mid-90s Petty groove. Fuller B-15.
- Gain: 48, VOL: 80, Bass: 60, Middle: 50, Treble: 38
- Gain 48: a little under default. This part wants less push than the other FullB15 patches.
- Bass 60: more low end.
- Middle 50: flat.
- Treble 38: top end pulled back noticeably.
- VOL 80: the level Michael set for this snaptone in the 2026-10-02 VOL audit. Trim here if the patch jumps in level against your others.
- Same in both CTL states. AMP and CAB are off in the `.prst`, so nothing stacks on the capture. The N->S block calls slot 54 directly.

EQ -- Bass EQ 2, always on.

50Hz: +1, 120Hz: +2, 400Hz: 0, 800Hz: 0, 4.5kHz: -4, VOL: 52.

Warm lows, dark top.

MOD -- off.

DLY -- off.

RVB -- Room, on CTL.

Mix: 12, Decay: 25, Trail: on.

A small room for the choruses.

CTL footswitch

On CTL: RVB (Room).

- **CTL off** -- Verses. Dry, deep pocket. This is the resting state the patch loads into.
- **CTL on** -- Choruses. A small room so the bass opens up.

Engage at the choruses. Off for the verses.
