

Your Love Changes Everything -- United Pursuit

Bass: Harley Benton P/J, 5-string, passive. Full board.

Part of a 5-song worship set. The board ahead of the GP-5 is fixed across all 5 songs -- see "Full Pedalboard" below. Only this GP-5 patch changes song to song.

Slow, spacious gospel-folk worship -- 71 BPM in A. United Pursuit's whole sound leans on room and space rather than density, and this song builds from an intimate verse into a fuller, more emotional chorus/bridge. Two CTL states track that: off stays dry and close, on opens up with a touch more push and a reverb swell for the "changes everything" payoff.

GP-5 Settings

Module order: NR -> PRE -> DST -> AMP -> CAB -> EQ -> MOD -> DLY -> RVB

NR -- Gate

- THRE: 22
- Always on.

PRE -- Micro Boost (MXR M133 Micro Amp)

- Gain: 50
- **CTL switch.** Off = bypassed, On = engaged.
- Simple, clean volume/presence lift -- no tone coloring. Off (verse) stays intimate and low in the mix. On (chorus/bridge) gives the part just enough extra push to feel like it opened up, without turning into a gain-stage change.

DST -- Off

Not used. No drive anywhere in this tone -- it's a clean, spacious ballad.

AMP/CAB -- NAM SnapTone, slot 54: FullB15 (always on)

- Built from the `Ampeg B18 - Head DI - Bass Chan - Vol 5 (B-18N)` NAM and the Apg115410 IR, combined into one snaptone.
- Real Ampeg B-18N at volume 5, warmer and fuller than the clean capture, into the Apg115410 (1x15 + 4x10) IR.
- Warm, organic worship. The fuller B-15 keeps the low end soft and round.
- Gain: 50, VOL: 80, Bass: 55, Middle: 50, Treble: 55
- Gain 50: the capture as built.
- Bass 55: a touch more low end.
- Middle 50: flat.
- Treble 55: a touch more top end.
- VOL 80: the level Michael set for this snaptone in the 2026-10-02 VOL audit. Trim here if the patch jumps in level against your others.
- Same in both CTL states. AMP and CAB are off in the `.prst`, so nothing stacks on the capture. The N->S block calls slot 54 directly.

EQ -- Bass EQ 1

- 33Hz: +5, 150Hz: 0, 600Hz: -2, 2kHz: +2, 8kHz: +2, VOL: 50
- Always on, both states. Gentle low-end anchor with a touch of clarity up top -- no scoop, no aggressive push, just enough shape to sit well under acoustic guitars and pads.

MOD -- B-Chorus (Boss CE-2B for Bass)

- Depth: 15, Rate: 0.4Hz, VOL: 50
- Always on, both states. Light touch -- adds width and the "spacious" character this style leans on, without becoming an obvious effect.

DLY -- Off

Not used. Space in this patch comes from the reverb, not repeats -- keeps a slow tempo like 71 BPM from getting cluttered.

RVB -- Hall

- Mix: 30, Decay: 55, Trail: On
- **CTL switch.** Off = bypassed, On = engaged.
- Off (verse) stays dry and close -- intimate. On (chorus/bridge) adds a lush hall swell that matches the emotional lift of the lyric, and Trail On means the tail doesn't get cut off if you switch back to CTL off right at a phrase ending.

CTL Summary (GP-5)

- **CTL Off -- Verse (default load state):** Micro Boost and Hall both bypassed. Dry, close, intimate -- lets the vocal and acoustic instruments lead.
- **CTL On -- Chorus / Bridge:** Micro Boost and Hall both engaged. A gentle push plus a reverb swell -- opens the part up for the bigger, more emotional sections without changing the fundamental tone.

Full Pedalboard -- Fixed For This Set

This patch is one of 5 built for one worship set (Unstoppable God, Giving It All to You, Your Love Changes Everything, The Bread Has Been Broken, Thrive). Every pedal ahead of the GP-5 is dialed in once and left untouched for the whole set -- only the GP-5 patch changes between songs. Don't touch these knobs between songs; that's the point.

1. Flamma FS-08 Octave -- Bypassed, entire set.

All four octave knobs at 0, Dry at 100, so nothing surprises you if the footswitch gets bumped. None of these five songs call for octave layering.

2. Donner Ultimate Comp -- Engaged, entire set.

- COMP: 42
- TONE: 50
- LEVEL: 55
- Mode: NORMAL

First in the chain -- evens out finger-attack dynamics before anything else touches the signal. Moderate COMP glues the sound together across a set that spans near-silence (Bread) to full push (Unstoppable God, Thrive)

without squashing quiet sections. NORMAL mode stays neutral -- voicing is handled per-song downstream.

3. Donner Stylish Fuzz -- Bypassed, entire set.

No fuzz texture anywhere in this set. True bypass throughout.

4. Joyo Tidal Wave -- Engaged, entire set.

- Drive: 25
- Blend: 35
- Presence: 55
- Level: 55
- Treble: 55, Middle: 58, Bass: 55
- Mid-Frequency toggle: 500Hz
- Bass-Shift toggle: 80Hz (tight, keeps a full band mix from turning to mud)
- Cab-Sim (DI out): On
- Ground Lift: Off (only flip on if a specific room throws hum)

The constant foundation stage for the whole set. Drive is low and Blend under half -- this adds harmonic warmth and preamp glue, not an audible overdrive. Also feeds a consistent DI signal to FOH all night, cab-sim engaged. Actual tone character per song comes from the GP-5 patch downstream, not from this pedal.

5. Joyo Narcissus -- Bypassed, entire set.

Modulation is handled per-song by each GP-5 patch's own MOD module instead (this song: B-Chorus, light, always on). Stacking this pedal on top would fight with that. True bypass throughout.

6. Valeton GP-5 -- as detailed above.

Footswitch Choreography

- **Verses:** GP-5 CTL off. Comp and Tidal Wave running underneath the whole time, unchanged.
- **Chorus / Bridge:** GP-5 CTL on. Step on it going into the lift, off again coming back down to the next intimate verse.
