

Bring Me to Life (Rhythm Guitar) -- Evanescence

From *Fallen* (2003). About 95 BPM, est.

Nu-metal meets gothic rock. The verses are piano and vocal. The guitars slam in with low, heavy chugs for the choruses, and the bridge builds to a big riffing climax.

Built from the song's overall sound. I haven't verified the exact guitars, amps or tuning on the record. It's tuned low. Check yours against the record.

Instrument: Stratocaster (HSS). Bridge humbucker throughout.

GP-5 only, Stratocaster (HSS), no pedalboard.

AMP: Mess DualM + CAB: V30112 IR (User IR 10)

High gain the whole way, so this stays on the GP-5's own amp, per the high-gain rule. No snaptone is a near-perfect match for an unverified rig.

Mess DualM is the Rectifier in Modern mode. Tight, saturated low end is the early-2000s nu-metal sound, and a low tuning needs it. V30112 is the V30 cab it was built to drive.

The ModernRect snaptone (slot 76) was the closest NAM. It's only a stand-in for an unverified rig, so the GP-5 amp wins.

Module chain

NR -- Gate, always on.

THRE: 42.

Low-tuned, high-gain stop-start riffs need hard stops. 42 keeps the gaps silent without chopping sustained chords.

PRE -- Boost (EP Booster), on CTL.

Gain: 45, +3dB: on, Bright: off.

The bridge push. More level and sustain for the climax and the lead lines. Bright off keeps it thick.

DST -- Green OD (TS-808), always on.

Gain: 8, Tone: 55, VOL: 72.

The tightening trick. Almost no gain, high level. It trims the Rectifier's flub so low-tuned chugs stay defined.

AMP -- Mess DualM, always on.

Gain: 60, PRES: 55, VOL: 60, Bass: 56, Middle: 46, Treble: 56.

Gain 60 is plenty with the TS in front. Middle 46 gives a slight nu-metal scoop without hollowing the guitar out under the vocal.

CAB -- User IR 10 (V30112), always on.

VOL: 60.

EQ -- Guitar EQ 2, always on.

100Hz: 0, 500Hz: -3, 1kHz: +1, 3kHz: +2, 6kHz: -2, VOL: 50.

-3 at 500Hz clears the boxiness of low-tuned chords. +2 at 3kHz for attack. -2 at 6kHz takes off the fizz.

MOD -- off.

DLY -- Analog, on CTL.

Mix: 18, Time: 474ms, Feedback: 25, Trail: on.

A dotted eighth at 95 BPM. Fills behind the bridge's lead lines and the climax.

RVB -- Room, always on.

Mix: 12, Decay: 30, Trail: on.

A small room. Heavy chugs don't want much space.

CTL footswitch

On CTL: PRE (Boost), DLY (Analog).

- **CTL off** -- Rhythm. Tight, low, saturated Rectifier chug for the choruses and riffs. This is the resting state the patch loads into.

- **CTL on** -- Lead. Boost plus dotted-eighth delay for the bridge build and the lead lines.

The verses are piano-led. Lay out, or play light palm mutes with the guitar volume rolled back.

Engage CTL for the bridge climax. Drop back for the final chorus if it's too loud against the band.
