

Hanging by a Moment (Rhythm Guitar) -- Lifehouse

From *No Name Face* (2000). About 124 BPM, est.

Driving 2000-era radio rock. A mid-gain riff and chugging verse rhythm, then bigger, wider chords in the chorus. Mid-gain, not high-gain. The guitars crunch but never get Rectifier-heavy.

Built from the song's overall sound. I haven't verified Jason Wade's exact guitars, amps or tuning on this track. Check your tuning against the record.

Instrument: Stratocaster (HSS). Bridge humbucker throughout. Roll the guitar volume to about 8 for the verses if they get too thick.

GP-5 only, Stratocaster (HSS), no pedalboard.

Module chain

NR -- Gate, always on.

THRE: 28.

Tight stops on the chugging verse. Stacked with the SD-1 in the chorus it needs a little more than a clean patch.

PRE -- off. A crunch Marshall compresses enough on its own.

DST -- Super OD (SD-1), on CTL.

Gain: 35, Tone: 55, VOL: 68.

The chorus lift. An SD-1 into a crunchy JCM800 gives a thicker, louder wall without going metal. VOL 68 adds level so the chorus jumps.

AMP/CAB -- NAM SnapTone, slot 68: ClassicMarshall (always on)

- Built from the `JCM800 2203 - P5 B5 M5 T5 MV5 G4 - AZG - 700` NAM and the V7X_dc (Marshall 1960AV) IR, combined into one snaptone.
- Real JCM800 2203 at Gain 4, classic crunch, into a Marshall 4x12.
- Same combo as December. The right mid-gain crunch for 2000-era post-grunge radio rock.
- Gain: 48, VOL: 50, Bass: 50, Middle: 58, Treble: 56
- Gain 48: just under the capture. The verse riff stays articulate.
- Bass 50: flat. The bass guitar owns the low end.
- Middle 58: more midrange. Keeps the riff forward in a dense mix.
- Treble 56: a touch more bite for the picked parts.
- VOL 50: the level Michael set for this snaptone in the 2026-10-01 VOL audit. Trim here if the patch jumps in level against your others.
- Same in both CTL states. AMP and CAB are off in the `.prst`, so nothing stacks on the capture. The N->S block calls slot 68 directly.

EQ -- Guitar EQ 2, always on.

100Hz: -2, 500Hz: -1, 1kHz: +1, 3kHz: +2, 6kHz: -1, VOL: 50.

Low cut keeps the chugs tight. +2 at 3kHz for pick attack. -1 at 6kHz trims the SD-1 fizz.

MOD -- off. No modulation on this one.

DLY -- Analog, on CTL.

Mix: 16, Time: 363ms, Feedback: 20, Trail: on.

A dotted eighth at 124 BPM. Widens the chorus chords and fills behind the lead lines. Mix 16 stays under the wall.

RVB -- Room, always on.

Mix: 14, Decay: 30, Trail: on.

A small room. Driving rock doesn't want much space.

CTL footswitch

On CTL: DST (Super OD), DLY (Analog).

- **CTL off** -- Rhythm. Mid-gain Marshall crunch for the intro riff and the verses. This is the resting state the patch loads into.

- **CTL on** -- Lead. SD-1-pushed Marshall plus dotted-eighth delay for the choruses and lead lines.

Engage CTL at the chorus. Drop back for the verses.
