

Sweet Leaf (Rhythm Guitar) -- Black Sabbath

From *Master of Reality* (1971). About 94 BPM for the main riff, est. The middle jam speeds up.

The prototype stoner-doom riff: a huge, thick, woolly power-chord grind after the famous looped cough, and a long solo jam in the middle.

Tuning: as far as I know, *Master of Reality* was tuned down a step and a half, to C#. Tune down to match the record.

Iommi's early-70s rig is widely described as a Laney stack with a Dallas Rangemaster treble booster in front.

This patch is built around that idea. I haven't verified the exact gear on this track.

Instrument: Stratocaster (HSS). Bridge humbucker throughout. Heavier strings help with the down-tuning.

GP-5 only, Stratocaster (HSS), no pedalboard.

Module chain

NR -- Gate, always on.

THRE: 35.

A boosted, cranked amp hisses. 35 keeps the gaps in the riff dead. Keep it below the level where held chords get cut off.

PRE -- Boost (EP Booster), always on.

Gain: 35, +3dB: off, Bright: on.

The Rangemaster stand-in. The capture already has a clean boost in front of the amp, so this one only adds the treble-booster edge.

Bright on gives the treble-heavy push. Gain 35 and +3dB off keep it from stacking into mush. It's always on because it's part of the core Iommi sound.

DST -- Sora Fuzz (Tone Bender), on CTL.

Fuzz: 55, VOL: 62.

A germanium Tone Bender-style fuzz for the solo jam. It adds hairy sustain on top of the boosted amp. Fuzz 55 keeps notes defined.

AMP/CAB -- NAM SnapTone, slot 74: CleanPlexi (always on)

- A Marshall JTM45 with a clean boost in front, into a Matchless ES212 2x12 loaded with Celestion G12M-25 Greenbacks.
- No Laney capture on hand. A boosted JTM45 is the closest thing to Iommi's boosted Laney, and the boost is already part of the capture. Michael checked it 2026-10-04: "very nice", "great lead sound".
- Gain: 50, VOL: 70, Bass: 55, Middle: 60, Treble: 48
- Gain 50: the capture as built. It's already boosted, so it needs no extra push.
- Bass 55: a touch more low end for the down-tuned riff.
- Middle 60: more midrange.
- Treble 48: slightly under flat, since the Bright boost adds top.
- VOL 70: the level Michael set for this snaptone on 2026-10-04. Trim here if the patch jumps in level against your others.

- Same in both CTL states. AMP and CAB are off in the `.prst`, so nothing stacks on the capture. The N->S block calls slot 74 directly.

EQ -- Guitar EQ 2, always on.

100Hz: +1, 500Hz: +2, 1kHz: +1, 3kHz: -1, 6kHz: -3, VOL: 50.

+1 at 100Hz and +2 at 500Hz add weight and woolly mids to the down-tuned riff. -3 at 6kHz tames the treble booster's fizz on the amp's back end.

MOD -- off.

DLY -- Tape, on CTL.

Mix: 16, Time: 380ms, F.Back: 22, Trail: on.

Warm tape echo behind the solo, early-70s style.

RVB -- Room, always on.

Mix: 10, Decay: 25, Trail: on.

Mostly dry. It's a 1971 room.

CTL footswitch

On CTL: DST (Sora Fuzz), DLY (Tape).

- **CTL off** -- Rhythm. A treble-boosted, cranked plexi grind for the main riff and the verses. This is the resting state the patch loads into.

- **CTL on** -- Lead. The Tone Bender fuzz stacks on top, plus tape echo, for the solo jam.

Engage CTL for the middle jam and the solo. Drop back for the riff.

Previous version (BritishCrunch, before 2026-10-04)

Moved to CleanPlexi on 2026-10-04. To go back, restore these values:

- N->S: slot 69, BritishCrunch (`Marshall JTM45 I Crunch BAL DI` + Origin Effects British Straight 4x12 Medium Mix). Gain 55, VOL 67, Bass 55, Middle 62, Treble 50.

- PRE Boost: Gain 60, +3dB on, Bright on.

- Everything else is unchanged.
