

Mary Jane's Last Dance (Rhythm Guitar) -- Tom Petty

Tom Petty and the Heartbreakers, 1993. It was the new track on *Greatest Hits*. About 84 BPM, est.

The main riff is a minor-key groove in A minor. Harmonica rides over the top.

The Heartbreakers' guitar sound is built on small combos pushed just into breakup. It's crunchy but never saturated.

Built from the band's general sound. I haven't verified the exact guitars and amps used on this track.

Instrument: Stratocaster (HSS). Position 2 (bridge+middle) for the riff, bridge humbucker for the solo.

GP-5 only, Stratocaster (HSS), no pedalboard.

AMP: Foxy 30TB (AC30 Top Boost) + CAB: EVM112 IR (User IR 5)

An AC30 Top Boost at the edge of breakup gives you the chime-plus-grit that sits under the harmonica. It crunches when you dig in and cleans up when you back off.

EVM112 is clean-voiced and flat, so the AC30's own character comes through without extra V30 honk.

Module chain

NR -- Gate, always on.

THRE: 20.

The AC30 at gain 38 plus a hot pickup hums between riff phrases. 20 cleans that up without chopping the ring-out on the Am chord.

PRE -- off. The amp already has enough grit for the rhythm.

DST -- Green OD, on CTL.

Gain: 35, Tone: 55, VOL: 68.

Pushes the already-edgy AC30 into a singing lead. The Tube Screamer mid-hump helps the solo cut through the band. VOL 68 gives about +3dB for the lead.

AMP -- Foxy 30TB, always on.

Gain: 38, Tone Cut: 45, VOL: 60, Bass: 50, Treble: 58, Char: Cool.

Gain 38 is the edge of breakup: the riff crunches, arpeggiated notes stay clear. Tone Cut 45 tames the AC30 top a bit. Char Cool keeps it vintage, not hot-rodded.

CAB -- User IR 5 (EVM112), always on.

VOL: 60.

EQ -- Guitar EQ 2, always on.

100Hz: -3, 500Hz: 0, 1kHz: +1, 3kHz: +1, 6kHz: -2, VOL: 50.

Low cut keeps the riff out of the bass's A string. The 1kHz and 3kHz lift adds mid bite. -2 at 6kHz takes off AC30 fizz.

MOD -- off. No modulation on the riff.

DLY -- Analog, on CTL.

Mix: 14, Time: 360ms, F.Back: 18, Trail: on.

About an eighth note at 84 BPM. A short, dark tail that thickens the solo without being obvious.

RVB -- Room, always on.

Mix: 14, Decay: 30, Trail: on.

A small room. Early-90s rock production kept guitars fairly dry. This just stops it from sounding direct-in.

CTL footswitch

On CTL: DST (Green OD), DLY (Analog).

- **CTL off** -- Rhythm. The edge-of-breakup AC30 for the Am riff, verses, and choruses. This is the resting state the patch loads into.
- **CTL on** -- Lead. Green OD into the AC30 plus eighth-note analog repeats. For the solo and outro lead lines.

Engage CTL for the solo and the outro. Step off when the riff comes back.
