

Puff the Magic Dragon (Rhythm Guitar) -- Peter, Paul and Mary

From *Moving* (1963). About 110 BPM, est.

An acoustic folk record: interlocking fingerpicked and strummed acoustic guitars under three-part harmony.

There's no electric part, so the Strat plays the acoustic role: bright, compressed, and dry-ish, with a Travis-picked or light-strum feel. CTL is for playing the melody.

Instrument: Stratocaster (HSS). Position 4 (neck+middle) for a hollow, acoustic-ish quack. Neck for the melody.

GP-5 only, Stratocaster (HSS), no pedalboard.

Module chain

NR -- Gate, always on.

THRE: 10.

Minimal.

PRE -- COMP (Ross), always on.

Sustain: 45, VOL: 55.

Sustain 45 flattens the pick attack into an acoustic-like even pluck.

DST -- Green OD (TS-808), on CTL.

Gain: 10, Tone: 52, VOL: 68.

A level lift at Gain 10, with no real drive, so the melody sits over the picking.

AMP/CAB -- NAM SnapTone, slot 64: BrightTwin (always on)

- Built from the `CLEANEST - Fender Deluxe Reverb 1965 [Hyper Accuracy]` NAM and the TWIN REVERB ____ BALANCED (vulturized Twin) IR, combined into one snaptone.
- 1965 blackface Deluxe Reverb at its cleanest setting. It shares the Twin's blackface preamp circuit, so here it's the amp half of a Twin clean, into a real Twin 2x12 (JBL D120F) IR. Rebuilt 2026-09-26: the original BrightTwin used the Tim R Twin Vibrato-channel capture, which was dropped for being too quiet. Balanced IR blend.
- Acoustic stand-in: a warm, round, clean Twin keeps the strum soft.
- Gain: 50, VOL: 75, Bass: 50, Middle: 42, Treble: 55
- Gain 50: the capture as built.
- Bass 50: flat.
- Middle 42: midrange pulled back noticeably.
- Treble 55: a touch more top end.
- VOL 75: the level Michael set for this snaptone in the 2026-10-01 VOL audit. Trim here if the patch jumps in level against your others.
- Same in both CTL states. AMP and CAB are off in the `.prst`, so nothing stacks on the capture. The N->S block calls slot 64 directly.

EQ -- Guitar EQ 2, always on.

100Hz: 0, 500Hz: -3, 1kHz: -1, 3kHz: +2, 6kHz: +2, VOL: 50.

The 500Hz cut removes electric box. The 3kHz and 6kHz lift adds string air. The lows stay flat, since an acoustic has body.

MOD -- off. No modulation. Folk stays pure.

DLY -- off. No delay.

RVB -- Room, always on.

Mix: 16, Decay: 30, Trail: on.

A natural room, like 60s folk in a studio.

CTL footswitch

On CTL: DST (Green OD, level lift).

- **CTL off** -- Rhythm. Bright, compressed, acoustic-ish fingerpicking and strum. This is the resting state the patch loads into.
- **CTL on** -- Lead. A level lift for picking out the melody.

Engage CTL to play the melody line. Off to accompany.
