

Rainbow Connection (Rhythm Guitar) -- Kenny Loggins

Kenny Loggins' version, from *Return to Pooh Corner* (1994). The song is by Paul Williams and Kenneth Ascher, and Kermit sang it first in 1979. About 72 BPM, est.

A gentle, acoustic-leaning lullaby. There's no real electric guitar part to copy, so this patch gives the Strat an acoustic-adjacent role: soft, fingerpicked, warm, and lightly shimmering.

Instrument: Stratocaster (HSS). Neck pickup, fingers, guitar tone knob around 6. Fingerpick the arpeggios. The patch is built to feel like a nylon or steel-string stand-in.

GP-5 only, Stratocaster (HSS), no pedalboard.

Module chain

NR -- Gate, always on.

THRE: 10.

Very low. Fingerpicked notes need to fade naturally.

PRE -- COMP (Ross), always on.

Sustain: 42, VOL: 55.

Compression evens out fingerpicking and adds an acoustic-like sustain bloom.

DST -- Green OD (TS-808), on CTL.

Gain: 12, Tone: 50, VOL: 68.

Almost no drive at Gain 12. It's a level and warmth lift so the melody sings over the arpeggios.

AMP/CAB -- NAM SnapTone, slot 64: BrightTwin (always on)

- Built from the `CLEANEST - Fender Deluxe Reverb 1965 [Hyper Accuracy]` NAM and the TWIN REVERB ___ BALANCED (vulturized Twin) IR, combined into one snaptone.
- 1965 blackface Deluxe Reverb at its cleanest setting. It shares the Twin's blackface preamp circuit, so here it's the amp half of a Twin clean, into a real Twin 2x12 (JBL D120F) IR. Rebuilt 2026-09-26: the original BrightTwin used the Tim R Twin Vibrato-channel capture, which was dropped for being too quiet. Balanced IR blend.
- Acoustic stand-in: warm, round, clean Twin.
- Gain: 50, VOL: 75, Bass: 50, Middle: 45, Treble: 52
- Gain 50: the capture as built.
- Bass 50: flat.
- Middle 45: midrange pulled back a little.
- Treble 52: a touch more top end.
- VOL 75: the level Michael set for this snaptone in the 2026-10-01 VOL audit. Trim here if the patch jumps in level against your others.
- Same in both CTL states. AMP and CAB are off in the `.prst`, so nothing stacks on the capture. The N->S block calls slot 64 directly.

EQ -- Guitar EQ 2, always on.

100Hz: -1, 500Hz: -2, 1kHz: 0, 3kHz: +2, 6kHz: +1, VOL: 50.

A 500Hz dip removes electric boxiness. The 3kHz and 6kHz lift adds acoustic-like air and string detail.

MOD -- A-Chorus, always on.

Depth: 14, Rate: 0.5, Tone: 55.

A light chorus, Depth 14. A soft shimmer that hints at a doubled acoustic.

DLY -- Tape, on CTL.

Mix: 16, Time: 420ms, F.Back: 22, Trail: on.

Soft tape echo behind the melody.

RVB -- Hall, always on.

Mix: 24, Decay: 50, Trail: on.

A warm hall for the dreamy lullaby space.

CTL footswitch

On CTL: DST (Green OD, level lift), DLY (Tape).

- **CTL off** -- Rhythm. Soft fingerpicked arpeggios. Warm, airy, lightly shimmering. This is the resting state the patch loads into.

- **CTL on** -- Lead. A slight lift plus tape echo for playing the vocal melody on guitar.

Engage CTL to take the melody. Off to accompany.
