

Sweet Leaf (Rhythm Guitar) -- Black Sabbath

From *Master of Reality* (1971). About 94 BPM for the main riff, est. The middle jam speeds up.

The prototype stoner-doom riff: a huge, thick, woolly power-chord grind after the famous looped cough, and a long solo jam in the middle.

Tuning: as far as I know, *Master of Reality* was tuned down a step and a half, to C#. Tune down to match the record.

Iommi's early-70s rig is widely described as a Laney stack with a Dallas Rangemaster treble booster in front.

This patch is built around that idea. I haven't verified the exact gear on this track.

Instrument: Stratocaster (HSS). Bridge humbucker throughout. Heavier strings help with the down-tuning.

GP-5 only, Stratocaster (HSS), no pedalboard.

Module chain

NR -- Gate, always on.

THRE: 35.

A boosted, cranked amp hisses. 35 keeps the gaps in the riff dead. Keep it below the level where held chords get cut off.

PRE -- Boost (EP Booster), always on.

Gain: 60, +3dB: on, Bright: on.

The Rangemaster stand-in. Bright on plus Gain 60 slams the amp with treble-heavy gain. It's always on because it's part of the core Iommi sound.

DST -- Sora Fuzz (Tone Bender), on CTL.

Fuzz: 55, VOL: 62.

A germanium Tone Bender-style fuzz for the solo jam. It adds hairy sustain on top of the boosted amp. Fuzz 55 keeps notes defined.

AMP/CAB -- NAM SnapTone, slot 69: BritishCrunch (always on)

- Built from the `Marshall JTM45 I Crunch BAL DI` NAM and the Origin Effects British Straight 4x12 Medium Mix IR, combined into one snaptone.
- Real Marshall JTM45 crunch, into the Origin Effects British Straight 4x12.
- No Laney capture on hand. The JTM45 is the closest British crunch, with fuzz and boost on top.
- Gain: 55, VOL: 67, Bass: 55, Middle: 62, Treble: 50
- Gain 55: noticeably over default. This part wants more push than the other BritishCrunch patches.
- Bass 55: a touch more low end.
- Middle 62: more midrange.
- Treble 50: flat.
- VOL 67: the level Michael set for this snaptone in the 2026-10-01 VOL audit. Trim here if the patch jumps in level against your others.
- Same in both CTL states. AMP and CAB are off in the `.prst`, so nothing stacks on the capture. The N->S block calls slot 69 directly.

EQ -- Guitar EQ 2, always on.

100Hz: +1, 500Hz: +2, 1kHz: +1, 3kHz: -1, 6kHz: -3, VOL: 50.

+1 at 100Hz and +2 at 500Hz add weight and woolly mids to the down-tuned riff. -3 at 6kHz tames the treble booster's fizz on the amp's back end.

MOD -- off.

DLY -- Tape, on CTL.

Mix: 16, Time: 380ms, F.Back: 22, Trail: on.

Warm tape echo behind the solo, early-70s style.

RVB -- Room, always on.

Mix: 10, Decay: 25, Trail: on.

Mostly dry. It's a 1971 room.

CTL footswitch

On CTL: DST (Sora Fuzz), DLY (Tape).

- **CTL off** -- Rhythm. A treble-boosted, cranked plexi grind for the main riff and the verses. This is the resting state the patch loads into.

- **CTL on** -- Lead. The Tone Bender fuzz stacks on top, plus tape echo, for the solo jam.

Engage CTL for the middle jam and the solo. Drop back for the riff.
