

Heads Carolina, Tails California -- Jo Dee Messina

I'm Alright, 1996. ~118 BPM, est.

Bright, bouncy 90s country-pop -- road-trip energy, no edge to the tone anywhere. The bass just needs to sit clean and punchy under the groove, not compete for attention.

GP-5 only, P/J bass, no pedalboard.

IR: TC410 (Slot 9)

TC Electronic BC 410 -- flat, neutral response with a mild 100Hz boost. No TC-family AMP model in the catalog, so it pairs by ear with a real amp instead of a suggested match.

Paired with the GP-5's **Classic Bass** (Ampeg SVT) model -- a workhorse clean bass amp voicing that gets out of the way and lets the TC410's flat response do its job.

- Gain: 45 -- clean headroom, no breakup.
- Bass: 55, Middle: 55, MidFreq: 450Hz, Treble: 65 -- treble pushed for the bright, present pick attack this style wants.
- VOL: 70.
- CAB: User IR 9, VOL: 60 -- real active reference to the TC410 cab.

Module chain

NR -- Gate, always on.

THRE: 25. Light touch -- just keeping the noise floor down between notes, nothing aggressive needed on a clean amp.

PRE -- Micro Boost, on CTL.

Gain: 45 when engaged.

Off for the verse, on for the chorus -- same clean tone throughout, just pushed a little harder and brighter for the hook.

DST -- off. No drive anywhere in this one -- the whole point is a clean, bright country-pop bass.

AMP -- Classic Bass, always on (settings above).

CAB -- User IR 9 (TC410), always on, VOL 60.

EQ -- Bass EQ 2, always on.

50Hz: +2, 120Hz: +3, 400Hz: -3, 800Hz: 0, 4.5kHz: +6, VOL: 55.

Small low-end support, a light cut around 400Hz to avoid boxiness, and a real push at 4.5kHz for that bright, present pick attack the genre wants.

MOD -- off. No modulation -- straightforward part, no need to color it.

DLY -- off. Dry and direct.

RVB -- Room, on CTL.

Mix: 20, Decay: 35, Trail: true.

Off for the verse -- tight and dry. On for the chorus alongside the boost, giving the hook a touch more air without washing out the groove.

CTL footswitch

Two modules on CTL: PRE (Micro Boost) and RVB (Room).

- **CTL off** -- verse groove. Dry, tight, clean. Resting state the patch loads into.
- **CTL on** -- chorus lift. Brighter push plus a touch of room reverb, same amp tone, bigger for the hook.

Engage CTL going into each chorus, back off for the verses -- same two-state approach as the rest of this batch.
