

When You Say Nothing At All -- Alison Krauss

I'll Remember You, 1995 (also on the Keith Whitley original, 1988). ~68 BPM, est.

Bluegrass-rooted country ballad, famous for how little is happening -- no wall of sound anywhere, ever.

The bass part supports, it doesn't lead. Warm, round, upright-adjacent -- closer to a Nashville session P-bass through a flat amp than anything modern.

GP-5 only, Sire fretless (passive), no pedalboard.

IR: Apg115 (Ampeg Heritage B-15, 1x15")

Slot 1. Prominent 100Hz peak, girth without harshness -- the classic "upright-in-a-box" bass cab voicing, and the closest thing in the library to what a session player would've actually tracked this through.

Paired with the GP-5's own Classic Bass (Ampeg SVT) AMP model per the suggested pairing -- same amp family as the cab capture.

- AMP Gain: 25 -- clean, no breakup anywhere. This song has zero grit in the low end.
- Bass: 60 -- full and round.
- Middle: 55, MidFreq: 450Hz -- enough midrange presence for the fretless to read as a note, not just low-end wash.
- Treble: 45 -- soft top end, matches the flatwound strings and the warm 100Hz-heavy cab.
- AMP VOL: 65
- CAB VOL: 60

Module chain

NR -- Gate, always on.

THRE: 25. Light touch -- just enough to keep noise floor down between the sparse phrases, doesn't need to fight anything.

PRE -- off. No boost anywhere. This song doesn't ask for a louder front end, it asks for restraint.

DST -- off. No drive, ever, on this patch.

AMP -- Classic Bass, always on. Settings above.

CAB -- User IR 1 (Apg115), always on. VOL: 60.

EQ -- Bass EQ 2, always on.

50Hz: +5, 120Hz: +3, 400Hz: -2, 800Hz: 0, 4.5kHz: +2, VOL: 100.

Small low-end reinforcement for that upright-adjacent weight, a slight dip around 400Hz to keep the fretless from getting boxy, a touch of top-end lift so the note attack stays audible under the vocal and dobro/steel.

MOD -- off. No chorus or vibe -- a wet fretless glide would work against how plainspoken this arrangement is.

DLY -- off. No delay. Dry and direct.

RVB -- Room, on CTL.

Mix: 22, Decay: 32, Trail: true.

Off for the verses -- close, dry, intimate. On for the choruses/bridge -- just enough room to open the sound up slightly without turning it into a wash. This song builds almost entirely on vocal harmony and arrangement, not bass dynamics, so the lift here is deliberately subtle.

CTL footswitch

One module on CTL: RVB (Room). That's the only thing this song asks the patch to do.

- **CTL off** -- verse sound. Dry, close, restrained. This is the resting state the patch loads into.
- **CTL on** -- chorus/bridge sound. A touch of room air opens things up without changing the fundamental tone.

Nudge CTL on for the choruses and the bridge, off everywhere else. This is a one-sound-mostly patch by design -- the song doesn't have the dynamic range to justify more than that, and overbuilding the CTL split here would fight the arrangement instead of serving it.
