

Ecstasy -- Rusted Root

Bass: Harley Benton P/J, 5-string, passive. GP-5 only.

From *When I Woke* (1994). ~102 BPM, est. -- the song's percussion-heavy, tribal-rock groove has a lot of syncopated energy that can feel faster than the underlying tempo suggests.

Rusted Root's whole sound is built on layered hand percussion and a driving, world-fusion groove, with vocals and energy that build toward something genuinely cathartic -- the title says it plainly. The bass needs to lock into that syncopated groove and stay tight through the verses, then help carry the song into its bigger, more intense climactic sections.

CTL off = the grounded, syncopated groove. CTL on = the big, ecstatic climax.

GP-5 settings

Module order: NR -> PRE -> DST -> AMP -> CAB -> EQ -> MOD -> DLY -> RVB.

NR -- Gate

- THRE: 20
- Always on. Moderate threshold -- there's real amp breakup and eventually real drive once the Green OD engages, needs cleanup between the syncopated hits.

PRE -- Micro Boost -- On CTL

- Gain: 52
- CTL off: bypassed (groove). CTL on: engaged (climax).
- Adds extra push on top of the Green OD engagement for the full-intensity climax.

DST -- Green OD (Ibanez TS808) -- On CTL

- Gain: 60, Tone: 55, VOL: 62
- CTL off: bypassed (groove -- amp alone, warm and edge-of-breakup). CTL on: engaged (climax).
- A Tube Screamer-style warm, mid-forward drive rather than a harsher distortion -- fits this song's organic, tribal-rock intensity better than something colder or more aggressive.

AMP -- Bellman 59B (Fender 59 Bassman, Bright Channel)

- Gain: 38, PRES: 55, VOL: 65, Bass: 56, Middle: 55, Treble: 55
- Always on, same for both CTL states.
- The Bright channel of a vintage Fender Bassman gives natural, warm breakup even at moderate Gain -- a good match for this song's organic, slightly raw energy. This same setting has to serve the grounded groove too, so it stays short of full drive; the Green OD is what pushes it into real intensity for the climax.

CAB -- User IR 6 (Hartke410)

- VOL: 60
- Always on, same for both CTL states.
- Bright, aggressive aluminum-cone voicing that keeps this present and defined through a busy, percussion-heavy mix.

EQ -- Bass EQ 1

- 33Hz: +3, 150Hz: -1, 600Hz: +2, 2kHz: +4, 8kHz: +2, VOL: 55
- Always on, same for both CTL states.
- +4 at 2kHz is the important one -- this keeps the syncopated groove articulate and readable against a wall of hand percussion, especially once the Green OD kicks in for the climax.

MOD -- Off

- No modulation. This groove needs to stay tight and rhythmically clear -- texture would work against the syncopation, not with it.

DLY -- Off

- Not used, for the same reason.

RVB -- Hall -- On CTL

- Mix: 25, Decay: 38, Trail: On
- CTL off: bypassed (groove -- tight and dry, locked with the percussion). CTL on: engaged (climax).
- Opens the space up for the song's big, cathartic climax -- a genuine "ecstasy" moment deserves some real scale.

CAB IR -- Hartke410 (Slot 6)

- Hartke XL410 with aluminum cones, confirmed loaded on User IR slot 6. Bright, aggressive voicing suited to a driven bass tone in a busy mix.
- Encoded directly into the `.prst` as a real, active CAB reference (`User IR 6`) -- no manual loading needed for this one.

CTL summary

- **CTL Off -- Groove.** Tight, syncopated, warm edge-of-breakup tone locked in with the percussion.
- **CTL On -- Climax.** Green OD and Micro Boost engage, Hall opens up -- bigger, more intense, matching the song's cathartic build.
- Engage CTL as the song builds into its most intense sections, back off returning to the grounded groove.

Note on GP-5-only

This patch is GP-5 only -- no pedalboard beyond the Valeton GP-5 itself. All the tone (groove, drive, space) comes from the GP-5's own modules above.
