

Higher -- Creed

Bass: Harley Benton P/J, 5-string, passive. Full board.

From *Human Clay* (1999), ~85 BPM.

Brian Marshall's part here follows the classic late-90s post-grunge shape -- moody, restrained verses building into a huge, driven "can you take me higher" chorus. Structurally this is close cousins with "Everlong" (same quiet-verse/huge-chorus alt-rock DNA), so this patch leans on the same NAM that build used, rather than reinventing the wheel for a genuinely similar job.

CTL off = the restrained verse. CTL on = the big chorus.

GP-5 settings

Module order: NR -> PRE -> DST -> AMP -> CAB -> EQ -> MOD -> DLY -> RVB.

NR -- Gate

- THRE: 24
- Always on. Moderate-high threshold -- the NAM below carries real grind, needs cleanup between notes.

PRE -- Micro Boost -- On CTL

- Gain: 58
- CTL off: bypassed (verse). CTL on: engaged (chorus).
- Verse stays restrained on its own. Chorus gets a clean push to match the song's own explosion in energy.

DST -- Off

AMP -- Off (null)

CAB -- Off (null)

- AMP/CAB replaced by the NAM below. No separate DST stage -- the NAM already carries all the grit this part needs.

EQ -- Bass EQ 1

- 33Hz: +3, 150Hz: 0, 600Hz: -2, 2kHz: +5, 8kHz: +3, VOL: 56
- Always on, same for both CTL states.
- +5 at 2kHz and +3 at 8kHz keep this bright and present -- post-grunge choruses like this one are guitar-heavy and loud, this part needs real cut to stay heard. -2 at 600Hz keeps it from getting boxy under all that upper-mid push.

MOD -- Off

- No modulation. Straight-ahead post-grunge rock tone.

DLY -- Off

- Not used.

RVB -- Room -- On CTL

- Mix: 22, Decay: 36, Trail: On

- CTL off: bypassed (verse). CTL on: engaged (chorus).
- Verse stays tight and close. Chorus opens up with a touch of room to match the bigger, more anthemic space that section lives in.

NAM -- Darkglass B7K Ultra (Slot 64)

- Gain: 60, VOL: 65, Bass: 55, Middle: 60, Treble: 60
- Replaces AMP + CAB entirely (both null in the module chain above).
- The B7K Ultra's modern, punchy drive/preamp character is exactly the territory late-90s post-grunge choruses live in -- the same reasoning that made it the right call for "Everlong." Gain pushed for real grind and presence, Middle and Treble both up to keep the part cutting through the guitars.

CTL summary

- **CTL Off -- Verse.** Restrained, moody, dry. Sitting back with the vocal.
- **CTL On -- Chorus.** Boost and room reverb engage together. Bigger, more open, matching the song's own explosion in energy.
- Engage CTL right as the "can you take me higher" chorus hits, disengage back into the next verse.

Full pedalboard (signal chain order)

1. Flamma FS-08 Octave -- Bypassed

- Footswitch off. No octave layering -- this part tracks the song's dynamics directly, an octave stack would clutter that.

2. Donner Ultimate Comp -- Engaged

- COMP: 52
- TONE: 60
- LEVEL: 58
- Mode: TREBLE
- Keeps the verse-to-chorus dynamics consistent within each section. TREBLE mode keeps pick/finger attack bright and audible before it hits the NAM's own drive stage.

3. Donner Stylish Fuzz -- Bypassed

- Footswitch off. The NAM's own drive already covers the grit this song needs -- a fuzz stacked on top would just mud things out.

4. Joyo Tidal Wave -- Bypassed

- Footswitch off, Drive/Blend not engaged. Same reasoning -- one drive source (the NAM) is enough.

5. Joyo Narcissus -- Bypassed

- Footswitch off. No chorus -- matches the MOD-off call on the GP-5. Straight-ahead rock tone throughout.

6. Valeton GP-5 -- see settings above.
