

Kokomo -- The Beach Boys

Bass: Harley Benton P/J, 5-string, passive. Full board.

From *Cocktail* (1988), ~104 BPM.

Pure breezy, tropical yacht-pop -- steel drums, marimba, gentle harmonies, and a glossy late-80s sheen over the whole production. The bass job is simple and warm: hold the groove down, stay smooth, never draw attention to itself. The song sits at a pretty uniform, easy-going energy throughout, with just a small lift for the "Aruba, Jamaica, ooh I wanna take ya" hook.

CTL off = the main verse/groove. CTL on = a gentle lift for the hook.

GP-5 settings

Module order: NR -> PRE -> DST -> AMP -> CAB -> EQ -> MOD -> DLY -> RVB.

NR -- Gate

- THRE: 12
- Always on. Very low threshold -- clean, smooth tone throughout, nothing to clean up.

PRE -- Micro Boost -- On CTL

- Gain: 42
- CTL off: bypassed (verse). CTL on: engaged (hook).
- A gentle push, not a dramatic one -- this song stays breezy and easy-going throughout, so the lift for the hook stays subtle.

DST -- Off

- No drive. This tone is clean and smooth from top to bottom.

AMP -- J-120 CL (Roland JC-120, Clean)

- VOL: 62, Bass: 55, Middle: 50, Treble: 52, Bright: Off
- Always on, same for both CTL states.
- The Jazz Chorus is a genuinely fitting name-and-character match here -- that glassy, smooth solid-state clean voicing is exactly the late-80s yacht-pop territory this song lives in. Bright switched off to keep things warm rather than glassy-hard, letting the MOD chorus below do the shimmer work instead.

CAB -- User IR 5 (EVM112)

- VOL: 60
- Always on, same for both CTL states.
- Versatile, hi-fi Electro-Voice voicing that stays out of the way -- this tone doesn't need a cab with a strong character of its own, just a clean, uncolored foundation under the J-120 CL.

EQ -- Bass EQ 2

- 50Hz: +3, 120Hz: +1, 400Hz: -1, 800Hz: +1, 4.5kHz: +2, VOL: 54
- Always on, same for both CTL states.
- Gentle and mostly flat -- warmth and a touch of smooth top-end sparkle, nothing carved out hard. This part

just needs to sit comfortably in a breezy, uncluttered mix.

MOD -- B-Chorus (Boss CEB-3)

- Depth: 25, Rate: 0.4Hz, VOL: 55
- Always on, same for both CTL states.
- A bit more present than the light touch used on some other patches -- this is genuinely glossy late-80s yacht-pop, where a smooth chorus shimmer is baked into the whole production's character, not just an occasional accent.

DLY -- Off

- Not used.

RVB -- Room -- On CTL

- Mix: 20, Decay: 30, Trail: On
- CTL off: bypassed (verse -- clean and direct). CTL on: engaged (hook).
- A light touch of room opens things up for the sing-along hook, matching the song's easy, warm lift there.

CAB IR -- EVM112 (Slot 5)

- Electro-Voice EVM12L, confirmed loaded on User IR slot 5. No bass/guitar-specific pairing implied by the cab itself -- picked here for its clean, versatile character alongside the J-120 CL AMP model.
- Encoded directly into the `.prst` as a real, active CAB reference (`User IR 5`) -- no manual loading needed for this one.

CTL summary

- **CTL Off -- Verse/groove.** Warm, smooth, breezy. The song's main energy level throughout.
- **CTL On -- Hook.** A gentle boost and a touch of room lift the "Aruba, Jamaica" hook just slightly above the rest.
- Engage CTL for the hook line, back off returning to the main groove.

Full pedalboard (signal chain order)

1. Flamma FS-08 Octave -- Bypassed

- Footswitch off. This is a simple, supportive groove -- no reason to layer octaves on it.

2. Donner Ultimate Comp -- Engaged

- COMP: 42
- TONE: 52
- LEVEL: 55
- Mode: NORMAL
- Light compression keeps this smooth and consistent. NORMAL mode keeps it warm rather than aggressively bright -- this song's brightness comes from the chorus and the J-120's own character, not extra pick attack.

3. Donner Stylish Fuzz -- Bypassed

- Footswitch off. No fuzz anywhere in this patch.

4. Joyo Tidal Wave -- Engaged

- Drive: 8
- Blend: 15
- Presence: 52
- Level: 55
- Treble: 52
- Middle: 55
- Bass: 55
- Mid-Frequency: 500Hz
- Bass-Shift: 40Hz
- Cab-Sim (DI out): On
- Ground Lift: On
- Used purely as a clean tone shaper and DI stage, not an overdrive -- Drive stays very low, Blend stays mostly clean. Bass-Shift at 40Hz keeps the low end full and warm, matching the song's relaxed, tropical feel.

5. Joyo Narcissus -- Bypassed

- Footswitch off. The GP-5's own B-Chorus already covers the shimmer this patch wants -- running a second chorus source would push it past "smooth" into "washy."

6. Valeton GP-5 -- see settings above.
