

November Rain -- Guns N' Roses

Bass: Harley Benton P/J, 5-string, passive. Full board.

From *Use Your Illusion I* (1991). Roughly ~52 BPM base pulse, though the song shifts feel across its nine minutes -- the piano intro sits slower and more rubato, the outro rock sections push harder even at a similar underlying tempo.

Duff McKagan's job here is the same "quiet build to massive climax" arc as "Under the Bridge" and "Purple Rain," but this one lands as straight-up hard rock at the top -- GNR's blues-rock roots come through hard once Slash's solo and the outro kick in. Verses stay restrained behind the piano; the outro turns into a genuinely driven rock wall.

CTL off = the quiet verse, following the piano. CTL on = the big driven rock climax/outro.

GP-5 settings

Module order: NR -> PRE -> DST -> AMP -> CAB -> EQ -> MOD -> DLY -> RVB.

NR -- Gate

- THRE: 20
- Always on. Moderate threshold -- needs to stay clean for the quiet verses but also handle real distortion once the DST engages for the outro.

PRE -- Micro Boost -- On CTL

- Gain: 52
- CTL off: bypassed (verse). CTL on: engaged (climax).
- Adds extra push on top of the DST engagement for the full outro buildup.

DST -- La Charger (MI Audio Crunch Box) -- On CTL

- Gain: 60, Tone: 58, VOL: 62
- CTL off: bypassed (verse -- amp alone, clean-to-edge). CTL on: engaged (climax).
- Crunch Box gives a thick, saturated rock crunch rather than a harsh, buzzy distortion -- the right character for a hard rock power ballad climax, not a metal one. This is what turns the tone from "restrained" to "driving" for the back half of the song.

AMP -- Classic Bass (Ampeg SVT)

- Gain: 30, Bass: 58, Middle: 54, MidFreq: 800Hz, Treble: 50, VOL: 65
- Always on, same for both CTL states.
- A real bass amp, not a guitar amp -- Duff McKagan's actual tone here is a proper rock bass rig, not a Marshall. Gain kept moderate since this same setting has to serve the quiet verse too; the La Charger module below is what pushes it into full rock drive for the climax. MidFreq at 800Hz gives a bit of rock bite without losing the SVT's low-end authority.

CAB -- User IR 3 (Apg810)

- VOL: 60

- Always on, same for both CTL states.
- Ampeg SVT-810E -- the direct real-world pairing for the Classic Bass AMP model above, and a properly bass-voiced cab rather than a guitar 4x12.

EQ -- Bass EQ 1

- 33Hz: +3, 150Hz: 0, 600Hz: +2, 2kHz: +3, 8kHz: +1, VOL: 55
- Always on, same for both CTL states.
- +3 at 2kHz keeps the line present and defined once the DST and the rest of the band pile in for the outro.
- +2 at 600Hz adds midrange body for when the distortion engages, without making the quiet verse sound boxy.

MOD -- Off

- No modulation. Straightforward hard rock ballad tone.

DLY -- Off

- Not used.

RVB -- Hall -- On CTL

- Mix: 30, Decay: 48, Trail: On
- CTL off: bypassed (verse -- dry, intimate, right with the piano). CTL on: engaged (climax).
- A big Hall for the huge, cinematic outro -- strings, choir-like backing vocals, and Slash's solo all call for real scale here.

CAB IR -- Apg810 (Slot 3)

- Ampeg SVT-810E, confirmed loaded on User IR slot 3 -- the classic "wall of Ampeg" bass stack, and the most direct real-world pairing for the Classic Bass AMP model above.
- Encoded directly into the `.prst` as a real, active CAB reference (`User IR 3`) -- no manual loading needed for this one.

CTL summary

- **CTL Off -- Verse.** Clean-to-edge amp tone, dry, restrained, sitting with the piano.
- **CTL On -- Climax.** La Charger and Micro Boost engage, Hall opens up -- driven, huge, matching the outro's guitar solo and cinematic scale.
- Engage CTL as the song turns the corner into its second half and builds toward the outro; there's no need to toggle back off once it's rolling.

Full pedalboard (signal chain order)

1. Flamma FS-08 Octave -- Bypassed

- Footswitch off. No octave layering needed for this part.

2. Donner Ultimate Comp -- Engaged

- COMP: 48
- TONE: 55
- LEVEL: 58
- Mode: TREBLE
- Moderate compression keeps the part consistent across both the restrained verse and the driven outro. TREBLE mode keeps attack alive once the distortion kicks in.

3. Donner Stylish Fuzz -- Bypassed

- Footswitch off. The GP-5's own La Charger gives a more controlled, polished rock crunch than a fuzz would -- the right call for a hard rock power ballad rather than something looser and messier.

4. Joyo Tidal Wave -- Engaged

- Drive: 25
- Blend: 50
- Presence: 58
- Level: 58
- Treble: 55
- Middle: 55
- Bass: 55
- Mid-Frequency: 500Hz
- Bass-Shift: 80Hz
- Cab-Sim (DI out): Off
- Ground Lift: Off
- Adds body and presence feeding the amp. Bass-Shift at 80Hz keeps things defined enough to cut through the huge outro wall of guitars and strings, even though it costs a little low-end fullness in the quieter verse.

5. Joyo Narcissus -- Bypassed

- Footswitch off. No chorus -- matches the MOD-off call on the GP-5. Direct rock tone throughout.

6. Valeton GP-5 -- see settings above.

Note on the full board vs. the `.prst`

The `.prst` file only encodes the GP-5's own 9 modules (NR through RVB). The Flamma octave, Donner Ultimate Comp, Donner Stylish Fuzz, and Joyo Tidal Wave/Narcissus settings above are not and cannot be part of that file -- they're pedals set by hand on the board, documented here so the full patch is reproducible.
