

Tennessee Whiskey -- Chris Stapleton

Bass: Sire V7 2nd Gen, 5-string fretless, flatwound, run **Passive**.

Full board.

Chris Stapleton's 2015 version (*Traveller*), ~68 BPM slow soul-blues shuffle.

This is the opposite job from the last few Muse patches -- no drive, no grit, no aggression. The whole point of pulling out the fretless here is the warmth: flatwounds plus no frets means a rounder, mwah-y, almost upright-bass character that sits perfectly under this song's smoky, soulful groove. Verses stay laid-back and intimate; the chorus and guitar solo open up just a touch more.

CTL off = the laid-back verse groove. CTL on = the chorus and guitar solo, where it opens up slightly.

Passive, not active -- this is the one call that flips from the Egan fretless build. Egan's fusion tone wanted headroom and hi-fi clarity to punch through a dense mix and feed two compression stages. This song wants the opposite: the warmer, slightly softer passive voicing that leans into the fretless's natural roundness instead of fighting it with active clarity.

GP-5 settings

Module order: NR -> PRE -> DST -> AMP -> CAB -> EQ -> MOD -> DLY -> RVB.

NR -- Gate

- THRE: 15
- Always on. Low threshold -- this is a clean, warm tone with minimal grit, nothing much to gate out.

PRE -- Micro Boost -- On CTL

- Gain: 45
- CTL off: bypassed (verse). CTL on: engaged (chorus/solo).
- Verse sits back in the pocket, no push needed. Chorus and guitar solo get a gentle clean lift to open the tone up slightly without ever getting aggressive -- this song never wants to feel pushed hard.

DST -- Off

- No drive anywhere in this patch. This tone is built entirely around warmth and touch, not gain.

AMP -- Classic Bass (Ampeg SVT)

- Gain: 30, Bass: 62, Middle: 52, MidFreq: 450Hz, Treble: 45, VOL: 65
- Always on, same for both CTL states.
- Gain kept low -- just enough natural amp character, no real push. MidFreq at 450Hz (rather than the growlier 800Hz used on more aggressive builds) sits in a warmer, rounder pocket that matches the mellow ballad instead of adding bark.

CAB -- User IR 1 (Apg115)

- VOL: 60
- Always on, same for both CTL states.
- Ampeg Heritage B-15 capture -- the classic soul/Motown-era bass amp, girthy low end with a prominent

100Hz peak. Perfectly suited to this song's soul-blues roots, and the suggested real-world pairing for the Classic Bass AMP model above.

EQ -- Bass EQ 1

- 33Hz: +4, 150Hz: +1, 600Hz: -3, 2kHz: +2, 8kHz: +4, VOL: 55
- Always on, same for both CTL states.
- Modest +4 at 8kHz brings out the fretless's natural mwah and finger noise without brightening the tone up past what this warm ballad wants (compare Egan's +10 at 8kHz for a hi-fi fusion voice -- this is the same band pulled way back). -3 at 600Hz clears the boxiness flatwounds tend to build up. +4 at 33Hz keeps real low-end weight under it all.

MOD -- Off

- No modulation. This tone stays dry and honest -- the warmth comes from the instrument and the amp, not a chorus effect.

DLY -- Off

- Not used. A laid-back soul ballad like this doesn't need rhythmic or ambient delay cluttering the pocket.

RVB -- Room -- On CTL

- Mix: 18, Decay: 30, Trail: On
- CTL off: bypassed (verse -- tight and intimate). CTL on: engaged (chorus/solo).
- A subtle touch of room opens the space up for the chorus and guitar solo, matching the slight lift in the song's energy without turning this into a wash.

CAB IR -- Apg115 (Slot 1)

- Ampeg Heritage B-15, confirmed loaded on User IR slot 1. Prominent 100Hz peak adds real girth -- the classic warm soul/blues bass voicing.
- Encoded directly into the `.prst` as a real, active CAB reference (`User IR 1`) -- no manual loading needed for this one.

CTL summary

- **CTL Off -- Verse.** Laid-back, warm, intimate. Dry, sitting right in the pocket.
- **CTL On -- Chorus/solo.** A gentle boost and a touch of room open the tone up slightly for the chorus hook and the guitar solo.
- Engage CTL going into the first chorus, and again through the guitar solo section.

Full pedalboard (signal chain order)

1. Flamma FS-08 Octave -- Bypassed

- Footswitch off. This song wants a single, warm, clean fundamental -- no reason to layer octaves on a fretless part built around touch and warmth.

2. Donner Ultimate Comp -- Engaged

- COMP: 45
- TONE: 45
- LEVEL: 55
- Mode: NORMAL
- Gentle compression evens out the fingerstyle dynamics without squashing the natural touch this part relies on. NORMAL mode (not TREBLE) on purpose -- this patch wants warmth, not extra brightness, and the fretless/flatwound combo already gives plenty of top-end control.

3. Donner Stylish Fuzz -- Bypassed

- Footswitch off. No fuzz anywhere near this patch -- it has no place in a warm soul-blues ballad.

4. Joyo Tidal Wave -- Engaged

- Drive: 10
- Blend: 20
- Presence: 50
- Level: 55
- Treble: 50
- Middle: 55
- Bass: 60
- Mid-Frequency: 500Hz
- Bass-Shift: 40Hz
- Cab-Sim (DI out): On
- Ground Lift: On
- Used purely as a clean-leaning tone shaper and DI stage here, not an overdrive -- Drive stays low and Blend stays mostly clean. Bass-Shift at 40Hz keeps the low end full and round rather than tight, matching the warm, unhurried feel of the song. Mid-Frequency at 500Hz reinforces body over attack.

5. Joyo Narcissus -- Bypassed

- Footswitch off. No chorus -- matches the MOD-off call on the GP-5. Dry, warm tone throughout, letting the fretless's own natural mwah do the talking.

6. Valeton GP-5 -- see settings above.
