

Touch, Peel, and Stand -- Days of the New

Bass: Harley Benton P/J, 5-string, passive. Full board.

From *Days of the New* (1997), ~83 BPM.

Days of the New's whole identity is a strange, effective hybrid -- Travis Meeks's 12-string acoustic up front, but underneath it a heavy, doomy, drop-tuned alt-metal low end and dark, grungy vocal harmonies. This song is moody and brooding in the verses, then drops into a heavier, driven chorus/hook. Unlike some of the brighter quiet/loud builds in this set, the whole song stays dark and atmospheric -- the chorus gets heavier and more pushed, not bigger and washier.

CTL off = the moody, restrained verse. CTL on = the heavier, driven chorus.

GP-5 settings

Module order: NR -> PRE -> DST -> AMP -> CAB -> EQ -> MOD -> DLY -> RVB.

NR -- Gate

- THRE: 26
- Always on. Higher threshold -- the NAM below carries real grind and low-end weight, needs solid cleanup between notes.

PRE -- Micro Boost -- On CTL

- Gain: 55
- CTL off: bypassed (verse). CTL on: engaged (chorus).
- Verse stays restrained and moody. Chorus gets a push to match the heavier, more driven hook.

DST -- Off

AMP -- Off (null)

CAB -- Off (null)

- Replaced entirely by the NAM below. No separate DST stage -- this song's darker, heavier drive character comes from one deep gain source, not a stack.

EQ -- Bass EQ 1

- 33Hz: +4, 150Hz: +1, 600Hz: -1, 2kHz: +3, 8kHz: +1, VOL: 55
- Always on, same for both CTL states.
- +4 at 33Hz leans into the doomy, drop-tuned low-end weight this band is known for. 8kHz kept low on purpose -- this tone stays dark and heavy, not bright, so there's no reason to chase top-end sparkle here.

MOD -- Off

- No modulation. Dark and direct.

DLY -- Off

- Not used.

RVB -- Room

- Mix: 18, Decay: 32, Trail: On
- Always on, same for both CTL states.
- Unlike most of the "quiet verse/big chorus" patches in this set, the reverb doesn't grow for the chorus here -- it's a constant, moderate atmosphere that matches the acoustic-driven verses' natural sense of space, and the chorus gets heavier through the boost instead of getting washier through more reverb.

NAM -- Darkglass Alpha Omega (Fuzz) (Slot 63)

- Gain: 62, VOL: 63, Bass: 60, Middle: 55, Treble: 52
- Replaces AMP + CAB entirely (both null in the module chain above).
- The Omega/fuzz side of the Alpha Omega gives a darker, murkier gain character than the Alpha/distortion side -- a better match for this song's moody, doomy alt-metal weight than a brighter, more aggressive distortion voicing. Treble kept modest to stay dark rather than cutting.

CTL summary

- **CTL Off -- Verse.** Moody, restrained, dark. A constant, moderate room ambience underneath.
- **CTL On -- Chorus.** A boost pushes the same dark, heavy tone harder for the driven hook -- this song gets heavier, not bigger and washier.
- Engage CTL right as the chorus/hook hits, disengage back into the next verse.

Full pedalboard (signal chain order)

1. Flamma FS-08 Octave -- Bypassed

- Footswitch off. No octave layering needed for this part.

2. Donner Ultimate Comp -- Engaged

- COMP: 50
- TONE: 52
- LEVEL: 58
- Mode: NORMAL
- Moderate compression keeps this consistent across the dynamic. NORMAL mode over TREBLE -- this tone stays dark and warm rather than bright, matching the song's moody, doomy character.

3. Donner Stylish Fuzz -- Bypassed

- Footswitch off. The NAM's own fuzz-voiced distortion already covers all the grit this song needs.

4. Joyo Tidal Wave -- Bypassed

- Footswitch off, Drive/Blend not engaged. Same reasoning -- one drive source (the NAM) is enough.

5. Joyo Narcissus -- Bypassed

- Footswitch off. No chorus -- matches the MOD-off call on the GP-5. Dark, direct tone throughout.

6. Valeton GP-5 -- see settings above.
