Everyday I Have the Blues -- John Mayer (Where the Light Is)

Full-band live cut, horns and rhythm section, mid-tempo shuffle around 104 BPM.
Board Option: White Tape (rebuilt 2026-10-16).
Mayer's rig for this set is boutique-clean-amp-into-a-Tube-Screamer-style-boost -- never a channel switch, just the same amp pushed harder for the solo.
This board copies that exact trick: one amp voicing, one boost that kicks it into gain for the lead break.

No modulation anywhere in this build. This song doesn't call for chorus/vibe -- it's a straight blues shuffle, and adding wobble would just muddy the horn-band mix.

GP-5 Settings

Patch VOL: 65. Raised from 55 on 2026-10-01, Michael's setting.

Module order: NR -> PRE -> DST -> AMP -> CAB -> EQ -> MOD -> DLY -> RVB

NR -- Gate
- THRE: 28
- Always on. HSS Strat single coils plus a boost stage downstream need a floor; 28 is light enough to not chop note decay.

PRE -- COMP4 (Keeley C4)
- Sustain: 30, Attack: 60, VOL: 55, Clip: 50
- Always on, both CTL states. Light touch -- evens out pick attack on the shuffle comping without squashing dynamics. Fast Attack (60) keeps transient snap so the rhythm still breathes.

DST -- Green OD (Tube Screamer / TS-808)
- Gain: 45, Tone: 55, VOL: 65
- **CTL switch.** Off = bypassed, On = engaged.
- This is the whole trick of the patch. Off, the amp runs clean-to-edge-of-breakup on its own for rhythm. On, the TS's mid hump shoves the same amp into a warmer, more compressed, singing lead voice -- the way Mayer actually does it live instead of switching amp channels.

AMP/CAB -- NAM SnapTone, slot 66: MayerDumble (always on)
- Built from the `SLAMMIN_DUMBLE_FORD_CLN_BALANCED_S (Dumble ODS #102)` NAM and the Bogner 2x12 EVM12L - SM57 1 - Cap Edge IR, combined into one snaptone.
- Dumble ODS #102 (the Robben Ford amp) clean channel, into a Bogner 2x12 with EVM12L speakers.
- Mayer's live blues tone is Dumble/Two-Rock clean. This is the Dumble half.
- Gain: 55, VOL: 75, Bass: 55, Middle: 65, Treble: 60
- Gain 55: noticeably over default. This part wants more push than the other MayerDumble patches.
- Bass 55: a touch more low end.
- Middle 65: more midrange.
- Treble 60: more top end.

- VOL 75: 5 over MayerDumble's audited 70. Michael bumped it for this patch on 2026-10-01.
- Same in both CTL states. AMP and CAB are off in the `.prst`, so nothing stacks on the capture. The N->S block calls slot 66 directly.

EQ -- Guitar EQ 2

- 100Hz: -2, 500Hz: +3, 1kHz: +2, 3kHz: 0, 6kHz: -3
- VOL: 50
- Always on. Small mid push (500Hz/1kHz) keeps the guitar cutting through the horn section without getting harsh; slight top-end trim (6kHz -3) tames fizz from the boost stage so the TS kick doesn't get brittle.

MOD -- Off

- Not used. No modulation for this song, on the GP-5 or the Narcissus.

DLY -- Slapback

- Mix: 30, Time: 320ms, F.Back: 20, Trail: On
- **CTL switch.** Off = bypassed, On = engaged.
- Rhythm stays dry and tight for the shuffle groove. Lead gets a short echo (320ms, low feedback) for width and sustain in a big room -- not a wash, just dimension.
- At 320ms this is an eighth-note echo more than a true slap. The real slap lives on the White Tape (see pedalboard).

RVB -- Spring

- Mix: 20, Decay: 30, Trail: On
- Always on, both states. A touch of spring keeps the amp from sounding dead-dry in a live mix without smearing the shuffle's rhythmic snap.

CTL Summary (GP-5)

- **CTL Off -- Rhythm/Intro:** Clean-to-edge-of-breakup Dumble clean, dry (no slap delay), compressed shuffle comping. This is the main groove sound.
- **CTL On -- Lead/Solo:** Green OD kicks the same amp into a warmer, more sustained, vocal lead tone, with slapback delay added for width.

Full Pedalboard (signal chain order)

1. Flamma FS-08 Octave -- Bypassed, whole song.

No octave layering here -- this is a straight blues shuffle, not a texture piece. Footswitch stays off for the entire song. Knobs are irrelevant while bypassed; leave Dry at 100 and the four octave knobs at 0 so there's no surprise if it's accidentally engaged.

2. Donner Ultimate Comp -- Engaged, whole song.

- COMP: 40
- TONE: 55
- LEVEL: 55
- Mode: NORMAL

Sits ahead of everything else and evens out pick dynamics before the boost/amp gain stages. NORMAL mode

(not TREBLE) because the EQ module and boost stage already add top end downstream -- don't stack brightness. This runs continuously through both rhythm and lead sections; it's gluing the touch dynamics, not shaping the lead/rhythm split.

3. Donner Stylish Fuzz -- Bypassed, whole song.
Not a fuzz song. True bypass, footswitch off throughout.

4. Joyo King of Kings -- Left channel engaged whole song, Right channel engaged only for solo sections.

Left channel (always on -- rhythm push):
- Volume: 55
- Gain: 25
- Tone: 50
- Clipping toggle: softer setting (smoother, lower-gain breakup character)
- Feedback toggle: standard setting (no added compression)

Low-gain, always-on push that adds a little extra edge-of-breakup grit ahead of the Dumble snaptone. The clean-channel capture stays clean on its own, so this supplies the front-end grit a cranked boutique amp would.

Right channel (solo/lead only):
- Volume: 65
- Gain: 60
- Tone: 60
- Clipping toggle: harder setting (more aggressive breakup)
- Feedback toggle: higher setting (more compression/sustain for leads)

Stacks in series after the left channel (both engaged together) for the guitar solo -- this is the extra push that, combined with the GP-5's Green OD + amp, gets the lead tone hot enough to cut over horns and a full rhythm section in a live room. Step on the right footswitch at the same moment you hit the GP-5's CTL switch for the solo; step off when you're back to rhythm.

5. Joyo Narcissus -- Bypassed, whole song.
No chorus anywhere in this patch, on the GP-5 or here. Keep it off to stay consistent with the dry, straight-blues character of the tune.

6. Valeton GP-5 -- as detailed above.

7. Donner White Tape -- tape slap, for the clean fills between horn lines.
- Top row (left channel) only. Mono rig, bottom row unused.
- Level: ~10:30. A clearly audible single echo, still behind the dry note.
- Time: ~120ms target, just past 8 o'clock. Slapback range.
- Feedback: fully counterclockwise. One repeat.
- This is the shared slap setting (same as Syndicate, Click Click Boom, Everyday Blues, My Maria, Somebody Like You, Neon Moon). Any of these can share a set without touching the knobs.
- Footswitch: on for the single-note fills you play between the horn lines in the rhythm sections (CTL off). Off for the shuffle comping.

- Why: CTL off is dry, so the fills had no echo at all. A true slap is the classic live-blues fill sound. It thickens short licks without smearing the shuffle.
- For the solo, leave it off: the GP-5's 320ms echo covers it. Stacking both works in a big, loud room, but it gets busy on fast licks.
- It sits after the GP-5's Spring, so the slap repeats a little spring with it.
- The clock positions assume the Time knob sweeps 25-1000ms evenly. Set the slap by ear: it should thicken the note, not answer it.

Footswitch Choreography

- **Rhythm / intro / horn-section trade-offs:** King of Kings left channel only, GP-5 CTL off. Comp always running underneath.
- **Fills between horn lines:** same as rhythm, plus the White Tape on. Off again when you go back to comping.
- **Guitar solo:** Step on King of Kings right channel (stacks with left) at the same time you hit GP-5 CTL on. Both come off together when the solo ends and you drop back to rhythm.
- Board Option = White Tape, so the Joyo American Sound is off the board for this build.
- Everything else (Octave, Fuzz, Narcissus) stays bypassed for the entire song -- this patch is deliberately lean: comp, two gain stages, one amp, one delay-for-lead trick. No clutter.
