

The Bread Has Been Broken -- Jeff Deyo

Bass: Harley Benton P/J, 5-string, passive. Full board.

Part of a 5-song worship set. The board ahead of the GP-5 is fixed across all 5 songs -- see "Full Pedalboard" below. Only this GP-5 patch changes song to song.

A communion song -- slow and reverent, in E, roughly 72 BPM (no published tempo found; built to feel like a quiet, unhurried ballad). This is the stillest moment in the set. The bass needs to all but disappear into the background: dark, warm, minimal presence, nothing that draws attention to itself. No CTL -- a footswitch change during a communion moment would be a distraction, not a feature. One tone, held the whole song.

GP-5 Settings

Module order: NR -> PRE -> DST -> AMP -> CAB -> EQ -> MOD -> DLY -> RVB

NR -- Gate

- THRE: 18
- Always on. Very light -- this patch runs almost no gain, so there's not much noise to clean up in the first place.

PRE -- COMP (Ross Compressor)

- Sustain: 35, VOL: 52
- Always on. Barely-there compression -- just keeps notes even at the very quiet, restrained playing this song calls for.

DST -- Off

Not used.

AMP/CAB -- NAM SnapTone, slot 59: WorshipSVT (always on)

- Built from the `SVT CLEAN PUSHED (SVT-CL)` NAM and the Ampeg SVT Bright Beta52 IR, combined into one snaptone.
- Real Ampeg SVT-CL on the clean-pushed setting, into a bright, Beta 52-miked SVT 4x10 IR.
- Modern worship bass: full, slightly pushed, clear top from a bright 4x10.
- Gain: 50, VOL: 50, Bass: 58, Middle: 45, Treble: 42
- Gain 50: the capture as built.
- Bass 58: more low end.
- Middle 45: midrange pulled back a little.
- Treble 42: top end pulled back noticeably.
- VOL 50: the default. Trim here if the patch jumps in level against your others.
- Same in both CTL states. AMP and CAB are off in the `.prst`, so nothing stacks on the capture. The N->S block calls slot 59 directly.

EQ -- Bass EQ 2

- 50Hz: +5, 120Hz: +2, 400Hz: -3, 800Hz: -3, 4.5kHz: -5, VOL: 48

- Always on. Low end kept for warmth and foundation, everything from 400Hz up rolled back -- dark and soft, no edge or bite anywhere in the tone.

MOD -- Off

Not used. Nothing to distract from the stillness of the moment.

DLY -- Off

Not used.

RVB -- Church

- Mix: 20, Decay: 60, Trail: On
- Always on. A long, soft decay gives the part air and reverence without adding rhythmic complexity -- fits a slow communion moment where space matters more than definition.

No CTL on this patch -- one still, reverent tone for the whole song.

Full Pedalboard -- Fixed For This Set

This patch is one of 5 built for one worship set (Unstoppable God, Giving It All to You, Your Love Changes Everything, The Bread Has Been Broken, Thrive). Every pedal ahead of the GP-5 is dialed in once and left untouched for the whole set -- only the GP-5 patch changes between songs. Don't touch these knobs between songs; that's the point.

1. Flamma FS-08 Octave -- Bypassed, entire set.

All four octave knobs at 0, Dry at 100, so nothing surprises you if the footswitch gets bumped. None of these five songs call for octave layering.

2. Donner Ultimate Comp -- Engaged, entire set.

- COMP: 42
- TONE: 50
- LEVEL: 55
- Mode: NORMAL

First in the chain -- evens out finger-attack dynamics before anything else touches the signal. Moderate COMP glues the sound together across a set that spans near-silence (this song) to full push (Unstoppable God, Thrive) without squashing quiet sections. NORMAL mode stays neutral -- voicing is handled per-song downstream.

3. Donner Stylish Fuzz -- Bypassed, entire set.

No fuzz texture anywhere in this set. True bypass throughout.

4. Joyo Tidal Wave -- Engaged, entire set.

- Drive: 25
- Blend: 35
- Presence: 55
- Level: 55
- Treble: 55, Middle: 58, Bass: 55
- Mid-Frequency toggle: 500Hz

- Bass-Shift toggle: 80Hz (tight, keeps a full band mix from turning to mud)
- Cab-Sim (DI out): On
- Ground Lift: Off (only flip on if a specific room throws hum)

The constant foundation stage for the whole set. Drive is low and Blend under half -- this adds harmonic warmth and preamp glue, not an audible overdrive. On this song specifically, that warmth is doing quiet, unglamorous work: keeping the tone full at very low playing volume. Actual tone character per song comes from the GP-5 patch downstream, not from this pedal.

5. Joyo Narcissus -- Bypassed, entire set.

This song's GP-5 patch runs no modulation at all, so this pedal simply stays out of the way, same as every other song. True bypass throughout.

6. Valeton GP-5 -- as detailed above.

Footswitch Choreography

None needed for this song. GP-5 loads its one patch state and stays there for the whole communion moment -- no CTL, no changes on the rest of the board.
