

Storm Corrosion -- Storm Corrosion

Storm Corrosion, the Steven Wilson and Mikael Akerfeldt project. BPM est., slow. Dark, sparse, folk-tinged ambient. The bass is warm and deep, working as a low anchor, not a lead voice. Built from the project's general sound; exact bass rig and who played it not verified.

GP-5 only, P/J bass, no pedalboard.

Module chain

NR -- Gate, always on.

THRE: 8.

Very quiet tone. 8 barely touches it.

PRE -- COMP, always on.

Sustain: 35, VOL: 58.

Very light. Preserves dynamics.

DST -- Bass OD, on CTL.

Gain: 20, Blend: 30, VOL: 60, Bass: 50, Treble: 35.

Light push for the climax. Dark treble, Blend 30.

AMP/CAB -- NAM SnapTone, slot 54: FullB15 (always on)

- Built from the `Ampeg B18 - Head DI - Bass Chan - Vol 5 (B-18N)` NAM and the Apg115410 IR, combined into one snaptone.
- Real Ampeg B-18N at volume 5, warmer and fuller than the clean capture, into the Apg115410 (1x15 + 4x10) IR.
- Dark, atmospheric, vintage-leaning. The fuller B-15 is warm without being clean-DI sterile.
- Gain: 44, VOL: 50, Bass: 62, Middle: 45, Treble: 30
- Gain 44: noticeably under default. This part wants less push than the other FullB15 patches.
- Bass 62: more low end.
- Middle 45: midrange pulled back a little.
- Treble 30: top end pulled back noticeably.
- VOL 50: the default. Trim here if the patch jumps in level against your others.
- Same in both CTL states. AMP and CAB are off in the `.prst`, so nothing stacks on the capture. The N->S block calls slot 54 directly.

EQ -- Bass EQ 2, always on.

50Hz: +3, 120Hz: +3, 400Hz: +1, 800Hz: -3, 4.5kHz: -5, VOL: 50.

Dark. Low end up, top rolled off.

MOD -- off. No modulation.

DLY -- off. No delay.

RVB -- Deepsea, on CTL.

Mix: 25, Decay: 55, Trail: off.

Huge deep decay for the climax. Mix 25 is obvious on purpose here.

CTL footswitch

On CTL: DST (Bass OD), RVB (Deepsea).

- **CTL off** -- Main body. Dark, deep, clean, dry. This is the resting state the patch loads into.
- **CTL on** -- Climactic sections. Light drive and a large Deepsea reverb.

Engage CTL for the climax moments. Back off for the sparse parts.
