

Unstoppable God -- Elevation Worship

Bass: Harley Benton P/J, 5-string, passive. Full board.

Part of a 5-song worship set. The board ahead of the GP-5 is fixed across all 5 songs -- see "Full Pedalboard" below. Only this GP-5 patch changes song to song.

Elevation Worship writes big, driving arena-worship rock. Unstoppable God sits at 132 BPM in B -- a fast, anthemic tune that needs the bass to lock a tight low end under the verses and then push harder under the chorus/bridge without losing the pocket. Two CTL states handle that split: verse stays controlled and supportive, chorus/bridge adds real push and top-end bite.

GP-5 Settings

Module order: NR -> PRE -> DST -> AMP -> CAB -> EQ -> MOD -> DLY -> RVB

NR -- Gate

- THRE: 25
- Always on. Enough to clean up noise from the two gain stages below without chopping sustain on held notes.

PRE -- Boost (Xotic EP Booster)

- Gain: 55, +3dB: On, Bright: Off
- **CTL switch.** Off = bypassed, On = engaged.
- Off state (verse) stays clean and out of the way. On state (chorus/bridge) is the first half of the push -- a clean, +3dB-boosted gain nudge ahead of the OD stage, not a tone-coloring stage. Bright off keeps it from getting harsh stacked with the OD after it.

DST -- Bass OD

- Gain: 50, Blend: 45, VOL: 58, Bass: 55, Treble: 60
- **CTL switch.** Off = bypassed, On = engaged.
- Blend at 45 keeps the fundamental intact -- this needs to still sound like a bass, not a fuzz pedal, even at full push. Treble at 60 gives it the edge to cut through a big arena-rock mix in the chorus. Off = clean verse. On = driven chorus/bridge, stacked with the Boost above for a real dynamic lift.

AMP/CAB -- NAM SnapTone, slot 59: WorshipSVT (always on)

- Built from the `SVT CLEAN PUSHED (SVT-CL)` NAM and the Ampeg SVT Bright Beta52 IR, combined into one snaptone.
- Real Ampeg SVT-CL on the clean-pushed setting, into a bright, Beta 52-miked SVT 4x10 IR.
- Big modern worship. Pushed SVT with a bright 4x10 top end.
- Gain: 60, VOL: 50, Bass: 58, Middle: 55, Treble: 60
- Gain 60: noticeably over default. This part wants more push than the other WorshipSVT patches.
- Bass 58: more low end.
- Middle 55: a touch more midrange.
- Treble 60: more top end.

- VOL 50: the default. Trim here if the patch jumps in level against your others.
- Same in both CTL states. AMP and CAB are off in the `.prst`, so nothing stacks on the capture. The N->S block calls slot 59 directly.

EQ -- Bass EQ 2

- 50Hz: +6, 120Hz: +2, 400Hz: -4, 800Hz: +4, 4.5kHz: +6, VOL: 52
- Always on, both states. 50Hz anchors the low end, 400Hz gets cut to keep it from clashing with guitars/pads in the low-mids, and 800Hz/4.5kHz get pushed for the presence and finger-attack clarity a 132 BPM anthem needs to stay articulate.

MOD -- Off

Not used. This is a driving, rhythmic part -- modulation would just blur the attack.

DLY -- Off

Not used. Bass delay would muddy a fast tempo like this.

RVB -- Off

Not used, both CTL states. Any room/ambience in the mix comes from the rest of the band -- the bass itself stays dry and upfront.

CTL Summary (GP-5)

- **CTL Off -- Verse (default load state):** Boost and Bass OD both bypassed. Clean, controlled, tight low end -- locks the groove without competing for space.
- **CTL On -- Chorus / Bridge:** Boost and Bass OD both engaged. Adds real push and top-end bite for the big moments, while EQ and the SVT/cab stay constant underneath so the tone doesn't lurch, just gets bigger.

Full Pedalboard -- Fixed For This Set

This patch is one of 5 built for one worship set (Unstoppable God, Giving It All to You, Your Love Changes Everything, The Bread Has Been Broken, Thrive). Every pedal ahead of the GP-5 is dialed in once and left untouched for the whole set -- only the GP-5 patch changes between songs. Don't touch these knobs between songs; that's the point.

1. Flamma FS-08 Octave -- Bypassed, entire set.

All four octave knobs at 0, Dry at 100, so nothing surprises you if the footswitch gets bumped. None of these five songs call for octave layering.

2. Donner Ultimate Comp -- Engaged, entire set.

- COMP: 42
- TONE: 50
- LEVEL: 55
- Mode: NORMAL

First in the chain -- evens out finger-attack dynamics before anything else touches the signal. Moderate COMP glues the sound together across a set that spans near-silence (Bread) to full push (Unstoppable God, Thrive) without squashing quiet sections. NORMAL mode stays neutral -- voicing is handled per-song downstream.

3. Donner Stylish Fuzz -- Bypassed, entire set.

No fuzz texture anywhere in this set. True bypass throughout.

4. Joyo Tidal Wave -- Engaged, entire set.

- Drive: 25
- Blend: 35
- Presence: 55
- Level: 55
- Treble: 55, Middle: 58, Bass: 55
- Mid-Frequency toggle: 500Hz
- Bass-Shift toggle: 80Hz (tight, keeps a full band mix from turning to mud)
- Cab-Sim (DI out): On
- Ground Lift: Off (only flip on if a specific room throws hum)

The constant foundation stage for the whole set. Drive is low and Blend under half -- this adds harmonic warmth and preamp glue, not an audible overdrive. Also feeds a consistent DI signal to FOH all night, cab-sim engaged. Actual tone character per song comes from the GP-5 patch downstream, not from this pedal.

5. Joyo Narcissus -- Bypassed, entire set.

Modulation is handled per-song by each GP-5 patch's own MOD module instead (this song: off). Stacking this pedal on top would fight with that. True bypass throughout.

6. Valeton GP-5 -- as detailed above.

Footswitch Choreography

- **Verses:** GP-5 CTL off. Comp and Tidal Wave running underneath the whole time, unchanged.
- **Chorus / Bridge:** GP-5 CTL on. That's the only switch this song needs -- everything else on the board stays put for the whole set.
