

Kiss Me - Sixpence None the Richer

Stratocaster (HSS), GP-5 only. "Kiss Me" is built on a bright, clean, twee strum -- Fender Twin-clean rhythm guitar with light chorus running throughout -- and a lifted, shimmering tone with slapback delay for the instrumental hook and bridge. Tempo: 145 BPM.

GP-5 Settings

Module order: NR -> PRE -> DST -> AMP -> CAB -> EQ -> MOD -> DLY -> RVB

- **NR -- Gate.** THRE 15. Light gate -- this patch stays clean and dynamic, don't choke the strum. Always on.
- **PRE -- COMP4.** Sustain 30, Attack 70, Clip 20, VOL 55. Gentle compression, evens out strum dynamics without squashing the pick attack. Always on.
- **DST -- Yellow OD.** Gain 20, VOL 65. Off for the main verse strum -- stays fully clean. On for the hook/bridge -- a light boost that lifts the tone, not real distortion. On CTL.

AMP/CAB -- NAM SnapTone, slot 61: TwinClean (always on)

- Built from the `Tim R Fender TwinVerb Norm Bright (Twin Reverb)` NAM and the TWIN REVERB ____ CLEAN (vulturized Twin) IR, combined into one snaptone.
- Real Fender Twin Reverb, Normal channel with Bright on, into the matching Twin cab IR (clean blend).
- Jangly, bright, clean pop. Twin Normal Bright.
- Gain: 50, VOL: 50, Bass: 45, Middle: 45, Treble: 65
- Gain 50: the capture as built.
- Bass 45: low end pulled back a little.
- Middle 45: midrange pulled back a little.
- Treble 65: more top end.
- VOL 50: the default. Trim here if the patch jumps in level against your others.
- Same in both CTL states. AMP and CAB are off in the `.prst`, so nothing stacks on the capture. The N->S block calls slot 61 directly.
- **EQ -- Guitar EQ 1.** 125Hz -5, 400Hz -8, 800Hz -3, 1.6kHz +8, 4kHz +10, VOL 55. Cuts low-mid mud, pushes highs for that bright, twee jangle. Always on.
- **MOD -- A-Chorus.** Depth 18, Rate 1.0Hz, Tone 55. Light chorus, both states -- this is the song's signature shimmer, always present under the strum. Always on.
- **DLY -- Slapback.** Mix 22, Time 110ms, Feedback 15, Trail on. Off for the verse -- keeps the main strum direct. On for the hook/bridge -- the slapback is what makes the lifted sections bounce and shimmer. On CTL.
- **RVB -- Room.** Mix 28, Decay 40, Trail on. Off for the verse -- stays tight and direct. On for the hook/bridge -- adds air behind the lifted tone. On CTL.

CTL Switch

- **CTL Off** = main verse strum. DST off, DLY off, RVB off -- dry, bright, clean.
- **CTL On** = lifted hook/bridge sound. DST on, DLY on, RVB on -- same clean base tone, boosted and given

room to breathe.

- Modules on CTL: DST, DLY, RVB. All three flip together on the same footswitch press.
- Use CTL Off for the verses. Switch to CTL On for the recognizable ascending hook and any bridge/instrumental section.
