

Dryad of the Woods -- Pain of Salvation

Pain of Salvation, prog metal. BPM est. Dynamic, nimble, warm but clear. The band moves between delicate and heavy, so the bass needs to do both. Built from the band's general sound; I haven't verified this song's specific bass tone.

GP-5 only, P/J bass, no pedalboard.

AMP: Foxy Bass + CAB: EVM112 IR (User IR 5)

EVM112 (Electro-Voice EVM12L) -- works for bass, open and neutral. Good for a dynamic, nimble part.

Module chain

NR -- Gate, always on.

THRE: 10.

Clean tone. 10 is light.

PRE -- COMP4, always on.

Sustain: 45, Attack: 40, Clip: 45, VOL: 58.

COMP4 lets the attack through and keeps the dynamics that a nimble part needs.

DST -- Bass OD, on CTL.

Gain: 30, Blend: 40, VOL: 60, Bass: 50, Treble: 45.

Heavy section push.

AMP -- Foxy Bass, always on.

VOL: 65, Bass: 58, Treble: 45.

Vox AC-100 is warm and clear with a slightly different character than the SVT. Only three controls, so Bass 58 and Treble 45 do the shaping.

CAB -- User IR 5 (EVM112), always on.

VOL: 60.

EVM112 IR.

EQ -- Bass EQ 1, always on.

33Hz: 0, 150Hz: +2, 600Hz: +1, 2kHz: +1, 8kHz: -1, VOL: 50.

Gentle. Small lift at 150Hz for warmth and 2kHz for note clarity.

MOD -- off. No modulation.

DLY -- off. No delay.

RVB -- Plate, on CTL.

Mix: 13, Decay: 30, Damp: 50, Trail: off.

Small plate for the heavy sections.

CTL footswitch

On CTL: DST (Bass OD), RVB (Plate).

- **CTL off** -- Delicate sections. Foxy Bass warm and clear, no drive. This is the resting state the patch loads into.
- **CTL on** -- Heavy sections. Bass OD and a plate reverb.

Engage CTL when the song gets heavy. Back off for quiet sections.
