

Your Ways Better -- Forrest Frank

Bass: Harley Benton P/J, 5-string, passive. Full board.

Chill, lo-fi bedroom-pop worship -- Forrest Frank's whole aesthetic (carried over from his Surfaces days) is warm, unhurried, and deliberately restrained, even at a chorus. ~92 BPM (estimate -- I don't have a hard chart reference for this one, and tempo isn't load-bearing for the tone choices below).

This isn't a big-dynamics song. No arena swell, no gospel bridge moment. The bass job is round, warm, and pocketed -- supportive, not a focal point. That said, the chorus hook still lifts a notch the way most pop choruses do, so this patch keeps a genuinely subtle CTL split: a touch of harmonic push and a whisper more room, not a wall of gain or a reverb bath. If the actual chorus turns out flatter than expected, CTL Off alone carries the whole song fine on its own.

GP-5 Settings

Module order: NR -> PRE -> DST -> AMP -> CAB -> EQ -> MOD -> DLY -> RVB

NR -- Gate

- THRE: 20
- Always on. Low-gain patch, just enough to clean up idle noise.

PRE -- COMP4 (Keeley C4)

- Sustain: 55, Attack: 55, Clip: 30, VOL: 100
- Always on. Firmer than a folk/ballad patch -- bedroom pop wants that smooth, glued, "produced" bass sustain rather than raw finger dynamics. VOL 100 makes up the compression's gain loss.

DST -- Bass OD (Boss ODB-3)

- Gain: 22, Blend: 22, VOL: 55, Bass: 55, Treble: 45
- **CTL switch.** Off = bypassed, On = engaged.
- This is the chorus lift, and it's deliberately subtle -- low Gain, low Blend. Off (verse), the tone is pure and clean. On (chorus), it adds a touch of harmonic warmth and perceived energy without turning into an audible overdrive -- the fundamental stays intact either way.

AMP -- Classic Bass (Ampeg SVT)

- Gain: 28, Bass: 60, Middle: 50, MidFreq: 220Hz, Treble: 42, VOL: 65
- Always on, both CTL states. SVT is the classic pop/R&B-adjacent bass voicing -- full and round rather than growly. MidFreq set to 220Hz (the lowest option) instead of the usual 800Hz keeps the mid push low and warm, not present/cutting -- that's the lo-fi character this song wants. Treble held back for the same reason.

CAB -- AMPG 4x10 (Ampeg SVT-410HE)

- VOL: 55
- Always on. Direct classic pairing for the Classic Bass amp model.

EQ -- Bass EQ 2

- 50Hz: +4, 120Hz: +2, 400Hz: -3, 800Hz: -2, 4.5kHz: 0, VOL: 52

- Always on, both states. Sub-focused low end for warmth, low-mid carved out to avoid boxiness, top end left flat -- no bright presence push, keeps the whole tone sitting warm and back in the mix rather than cutting.

MOD -- B-Chorus (Boss CE-2B for Bass)

- Depth: 12, Rate: 0.4Hz, VOL: 50
- Always on, both states. Very light touch -- just enough shimmer to avoid a dead-flat DI tone, not an obvious chorus effect.

DLY -- Off

Not used. No delay anywhere on this part.

RVB -- Room

- Mix: 18, Decay: 30, Trail: On
- **CTL switch.** Off = bypassed, On = engaged.
- Off (verse) stays dry and tucked back. On (chorus) opens up with a small room -- a whisper, not a swell, matching how understated this song's dynamics actually are.

CTL Summary

- **CTL Off -- Verse (default load state):** Bass OD and Room both bypassed. Clean, dry, pocketed -- pure foundation tone.
- **CTL On -- Chorus:** Bass OD and Room both engaged. A subtle harmonic lift plus a touch of space -- noticeably "more," never "bigger."

Full Pedalboard

Signal chain order: Flamma FS-08 Octave -> Donner Ultimate Comp -> Donner Stylish Fuzz -> Joyo Tidal Wave -> Joyo Narcissus -> Valeton GP-5.

Flamma FS-08 Octave -- bypassed

- All octave knobs (-2OCT, -OCT, +OCT, +2OCT) at 0, Dry at 100
- No octave layering anywhere in this song.

Donner Ultimate Comp -- engaged

- COMP: 38, TONE: 50, LEVEL: 55, Mode: NORMAL
- Evens out finger-attack dynamics at the source, ahead of the GP-5's own COMP4 -- the two stages stack for that extra-smooth, glued bedroom-pop low end this genre wants. NORMAL mode stays neutral; brightness is handled downstream.

Donner Stylish Fuzz -- bypassed

No fuzz texture anywhere in this song.

Joyo Tidal Wave -- engaged

- Drive: 15, Blend: 25, Presence: 45, Level: 55
- Treble: 45, Middle: 55, Bass: 55
- Mid-Frequency toggle: 500Hz (bass body warmth, not pick-attack cut-through)
- Bass-Shift toggle: 40Hz (fuller, warmer low end -- this is a sparse lo-fi arrangement, not a busy full-band mix)

that needs extra tightness)

- Cab-Sim (DI out): On
- Ground Lift: Off (only flip on if a specific room throws hum)
- Drive kept very light -- the harmonic lift for this song is Bass OD's job on the GP-5, not this pedal's. Here it's purely foundational glue plus a consistent DI feed to FOH.

Joyo Narcissus -- bypassed

Modulation is handled by the GP-5's own MOD module (B-Chorus, light, always on). Stacking this pedal on top would fight with that.

Valeton GP-5

See GP-5 settings above.

Footswitch Choreography

- **Verse:** GP-5 CTL off. Comp and Tidal Wave running underneath, unchanged.
- **Chorus:** GP-5 CTL on. Step on it going into the hook, off again coming back down to the next verse.
